Top Down Karen Ferguson, 2013-06-27 At first glance the Ford Foundation and the black power movement would make an unlikely partnership After the Second World War the renowned Foundation was the largest philanthropic organization in the United States and was dedicated to projects of liberal reform Black power ideology which promoted self determination over color blind assimilation was often characterized as radical and divisive But Foundation president McGeorge Bundy chose to engage rather than confront black power s challenge to racial liberalism through an ambitious long term strategy to foster the social development of racial minorities The Ford Foundation not only bankrolled but originated many of the black power era s hallmark legacies community control of public schools ghetto based economic development initiatives and race specific arts and cultural organizations In *Top Down* Karen Ferguson explores the consequences of this counterintuitive and unequal relationship between the liberal establishment and black activists and their ideas In essence the white liberal effort to reforge a national consensus on race had the effect of remaking racial liberalism from the top down a domestication of black power ideology that still flourishes in current racial politics Ultimately this new racial liberalism would help foster a black leadership class including Barack

Obama while accommodating the intractable inequality that first drew the Ford Foundation to address the race problem

The Lever of Riches Joel Mokyr, 1992-04-09 In a world of supercomputers genetic engineering and fiber optics technological creativity is ever more the key to economic success But why are some nations more creative than others and why do some highly innovative societies such as ancient China or Britain in the industrial revolution pass into stagnation Beginning with a fascinating concise history of technological progress Mokyr sets the background for his analysis by tracing the major inventions and innovations that have transformed society since ancient Greece and Rome What emerges from this survey is often surprising the classical world for instance was largely barren of new technology the relatively backward society of medieval Europe bristled with inventions and the period between the Reformation and the Industrial Revolution was one of slow and unspectacular progress in technology despite the tumultuous developments associated with the Voyages of Discovery and the Scientific Revolution What were the causes of technological creativity Mokyr distinguishes between the relationship of inventors and their physical environment which determined their willingness to challenge nature and the social environment which determined the openness to new ideas He discusses a long list of such factors showing how they interact to help or hinder a nation's creativity and then illustrates them by a number of detailed comparative studies examining the differences between Europe and China between classical antiquity and medieval Europe and between Britain and the rest of Europe during the industrial revolution He examines such aspects as the role of the state the Chinese gave up a millennium wide lead in shipping to the Europeans for example when an Emperor banned large ocean going vessels the impact of science as well as religion politics and even nutrition He questions the importance of such commonly cited factors as the spill over benefits of war the abundance of natural resources life expectancy and labor costs Today an ever greater number of industrial economies are competing in the global market locked in a struggle that revolves around technological ingenuity *The Lever of Riches* with its keen analysis derived from a sweeping survey of creativity throughout history offers telling insights into the question of how Western economies can maintain and developing
