and the dangerous border crossings pursued by migrants into Europe And yet the role of borders extends beyond specific sites of conflict On the largest scale borders define the limits of empire the two walls in Britain that once represented the northwestern edge of the Roman Empire the mythological eastern gate supposedly closed off by Alexander the Great China's virtual Great Firewall On the smallest human scale cell walls are the last physical barrier against disease after lines of quarantine have failed Finally as *The Edge of the Plain* reveals humans have not only made their mark on the landscape the landscape itself is now changing more and more rapidly due to climate change Crawford introduces us to both the Alpine watershed one such shifting natural borderline and the Great Green Wall in Africa envisioned as an international community built bulwark against desertification Borders are as old as human civilization and focal points for today's colliding forces of nationalism climate change globalization and mass migration *The Edge of the Plain* illuminates these lines of separation past and present how we define them and how they define us
