Economic And Medical Evaluation Of Health Care Technologies:

Economic and Medical Evaluation of Health Care Technologies A. J. Culyer, B. Horisberger, 2012-12-06 All too frequently the largest effective barrier to interdisciplinary communication is jargon The symposium whose proceedings appear in the following pages sought of course to eliminate unnecessary and obscurantist jargon but it sought also to do something far more ambitious to confront the intellectual issues that are attached to the use of the word evaluation in medicine and health services To this end a carefully selected group of experts in medicine epidemiology and health economics was invited to present papers They were selected for their reputations either as conceptualizers or as empirical evaluators or the rarest breed of expert as both The context was to be empirical Three procedures were selected that had been subject to evaluation but that posed rather different types of problem The first was the treatment of renal failure by dialysis of various kinds This has a relatively long history of evaluation with a large literature and particularly raises broad policy issues within the health services of Western societies as to the size of programmes to be provided the type location and mix of treatments the selection of patients to receive treatment and the measurement of the success of various strategies The second was the treatment of duodenal ulcer by a new species of drug the histamine H₂ receptor antagonists specifically cimetidine

Standards for the Socioeconomic Evaluation of Health Care Services Bryan R. Luce, Anne Elixhauser, 2012-12-06 Over the past decades health care delivery once characterized by clearly defined relationships between medical professionals regulators and industry has become much more complex Traditional roles and relationships are changing and new decision makers are entering the scene They bring into the discussion the need for cost containment and the changing perceptions of the public with regard to the risks and benefits of health care outcomes As benefits of medical care are increasingly questioned and as scepticism and fear of advanced technologies are demonstrated by a growing body of people decision making must move beyond medical concerns to encompass economic political and sociological considerations This evolution has also affected the pharmaceutical industry Public perception of responsibility for product safety is no longer limited to regulators and physicians Manufacturers previously unencumbered by social policies governmental preoccupations or public expectations are now held accountable for product safety As a certain amount of risk acceptance is however a prerequisite for the further development of health care goods it has to be carefully balanced against society's demand for safety To weigh risks against benefits to define acceptable risk and to exclude what no longer falls within this category remain perpetual challenges Accordingly health care outcomes have to be assessed not only from a clinical point of view but also from an economic and societal perspective The assessment of drug risks and benefits has become an important political issue world wide

The Economics of Medical Technology Frans F.H. Rutten, Stanley J. Reiser, 2012-12-06 Technological development has created major possibilities for the treatment of disease and for the disabled The cost of new technologies has added considerably to health care cost inflation which still exceeds the growth rates of most national economies The share of national resources devoted to health care is still rising although at a lesser pace than in the seventies Therefore the use of medical technology confronts us with some of the major dilemmas in society today The routine and intensive use of technology has transformed the most basic interpersonal and social features of medicine It has altered the means through which patient and doctor communicate about illness as well as the content of this communication changed the doctor's relationship to medical colleagues by increasing his dependence on them altered the place and form of practice by creating advantages for the centralization of medical care in complex organizations and created for society new responsibilities and powers to influence the context and scope of medical practice

Health Care Technology and Its Assessment Henry David Banta, Bryan R. Luce, 1993 Since 1945 a broad array of health care technologies have come into use including antibiotics anti hypertensive drugs oral diuretics oral contraceptives psycho pharmaceuticals corticosteroids vaccines open heart surgery genetics screening automated clinical laboratories renal dialysis and cardiac pacemakers Unquestionably these technologies have brought benefits to millions However as costs of health care have risen rapidly governments have increasingly singled out expensive technology as the culprit The result has been changes in the methods of paying for health care in most countries to control cost rises This has led to a slowing of technological change in some countries and increasing necessities to choose in all countries This timely work describes how technology assessment critically evaluates the benefits costs and social implications of technology The book presents an international perspective on health care technology's development and diffusion and explains how health care technology can enlighten difficult choices faced by policy makers clinicians and patients
