Economic Development Competing Par:

Competition Law and Development D. Daniel Sokol, Thomas K. Cheng, Ioannis Lianos, 2013-09-11 The vast majority of the countries in the world are developing countries there are only thirty four OECD Organisation for Economic Co operation and Development countries and yet there is a serious dearth of attention to developing countries in the international and comparative law scholarship which has been preoccupied with the United States and the European Union Competition Law and Development investigates whether or not the competition law and policy transplanted from Europe and the United States can be successfully implemented in the developing world or whether the developing world experience suggests a need for a different analytical framework The political and economic environment of developing countries often differs significantly from that of developed countries in ways that may have serious implications for competition law enforcement The need to devote greater attention to developing countries is also justified by the changing global economic reality in which developing countries especially China India and Brazil have emerged as economic powerhouses Together with Russia the so called BRIC countries have accounted for thirty percent of global economic growth since the term was coined in 2001 In this sense developing countries deserve more attention not because of any justifiable differences from developed countries in competition law enforcement either in theoretical or practical terms but because of their sheer economic heft This book the second in the Global Competition Law and Economics series provides a number of viewpoints of what competition law and policy mean both in theory and practice in a development context

Competition Law and Antitrust David J. Gerber, 2020 Competition law now affects virtually all aspects of economic life in many parts of the world This book provides an overview of competition law s substantive content and methods as well as an analysis of its dynamics It is a critical tool for anyone dealing with competition law

New Developments in Competition Law and Economics Klaus Mathis, Avishalom Tor, 2019-03-18 This book further develops both the traditional and the behavioural approach to competition law and applies these approaches to a variety of timely issues It discusses several fundamental questions regarding competition law and economics and explores the applications of competition law and economics In turn the book analyses the interplay of intellectual property rights and patents in various aspects of competition law and investigates the impacts that developments in information technology such as big data analytics have on competition law The book also discusses the impact of energy law reforms on energy markets from a competition law perspective Competition law is a classic field of economic analysis This is largely due to the fact that competition law uses terms such as market price and competition and must therefore rely on economic know how and analyses In the United States economic analysis has greatly influenced not just the scholarship on antitrust law but also judicial decisions and agency enforcement Antitrust law and economics are based on the traditional paradigm of neoclassical economics which relies on the assumption that the market players i e consumers and producers are rational This approach to competition law was later received in Europe under the banner of a more economic approach For

the past two decades behavioural law and economics which seeks to generate better insights into legal phenomena by providing more realistic psychological foundations for economic models and to offer a multitude of applications in legislation and legal adjudication has challenged the traditional economic approach to law in general and more recently to competition law specifically

Competition Law in Latin America Julián Peña, Marcelo Calliari, 2016-02-18 In the past few years Latin American countries have taken giant steps to reposition their competition authorities in the global antitrust arena granting them much greater autonomy both domestically and internationally This is the first book to offer an in depth analysis of this complex scenario At the heart of the presentation are seven chapters detailing the competition regimes of the most active national jurisdictions in the region Argentina Brazil Chile Colombia Mexico Peru and Uruguay Written by practicing experts with considerable hands on experience in their respective countries each of these chapters provides a comprehensive description and explanation of the evolution current state and prospects for antitrust in the country Preceding these country by country analyses are more general chapters on the use of economic analysis and on the special field of the information and communications technology industry as well as chapters on the working of competition law in countries with regulated markets and in the cluster of Central American countries Topics addressed encompass the following and more relevant institutions and legislation cartel investigations unilateral conduct policies merger review international coordination enforcement and remedies Each chapter includes analysis of relevant case law allowing the reader to gauge the positions views and tendencies of each competition law regime The authors also pay attention to the specificities and idiosyncrasies that are so important for a correct understanding of the practical realities of competition policy and enforcement With its wide ranging and in depth approach this book provides an incomparable analysis of a challenging region poised to become increasingly important in the international recognition and enforcement of antitrust law It is in this sense an essential guide for lawyers economists corporations academics and government officials interested in understanding where competition law is and where it is going to in Latin America

Public Procurement and the EU Competition Rules Albert Sánchez Graells, 2015-06-25 Public procurement and competition law are both important fields of EU law and policy intimately intertwined in the creation of the internal market Hitherto their close connection has been noted but not closely examined This work is the most comprehensive attempt to date to explain the many ways in which these fields often considered independent of one another interact and overlap in the creation of the internal market This process of convergence between competition and public procurement law is particularly apparent in the 2014 Directives on public procurement which consolidate the principle of competition in terms very close to those advanced by the author in the first edition This second edition builds upon this approach and continues to ask how competition law principles inform and condition public procurement rules and whether the latter in their revised form are adequate to ensure that competition is not distorted The second edition also deepens the analysis of the market behaviour of the public buyer from a competition perspective

Proceeding through a careful assessment of the general rules of competition and public procurement the book constantly tests the efficacy of these rules against a standard of the proper functioning of undistorted competition in the market for public procurement It also traces the increasing relevance of competition considerations in the case law of the Court of Justice of the European Union and sets out criteria and recommendations to continue influencing the development of EU Economic Law

EU Competition Law, Data Protection and Online Platforms: Data as Essential Facility Inge Graef, 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition Nonetheless concerns are increasingly raised about the market dominance of a few key players Because these companies hold the power to drive rivals out of business regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines social networks and e commerce platforms commonly referred to as the gatekeepers of the Internet The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so called essential facilities doctrine according to which firms need access to shared knowledge in order to be able to compete A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals Building on the refusal to deal concept and using a multidisciplinary approach the analysis covers such issues and topics as the following data portability interoperability data as a competitive advantage or entry barrier in digital markets market definition and dominance with respect to data disruptive versus sustaining innovation role of intellectual property regimes economic trade off in essential facilities cases relationship of competition enforcement with data protection law and data related competition concerns in merger cases The author draws on a wealth of relevant material including EU and US decision making practice case law and policy documents as well as economic and empirical literature on the link between competition and innovation The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data In addition it makes suggestions as to how data protection interests can be integrated into competition policy An invaluable contribution to ongoing academic and policy discussions about how data related competition concerns should be addressed under competition law the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms It will be of immeasurable value to the many jurists business persons and academics concerned with this very timely subject

Changes by Competition Hyeong-ki Kwon, 2021-02-11 By tracing the evolution of South Korean state led capitalism and comparing it with other economies this book critiques prevalent theories including neoliberalism the developmental state and institutionalism and proposes a theoretical alternative focusing on endogenous changes through elites competition within and outside the state Unlike the arguments of neoliberals this volume asserts that the state can still play an active role in reconstituting the national economy through globalization The Korean state successfully fosters economic growth by nurturing industrial commons through globalization rather than by adopting a neoliberal free market system This volume asserts that the Korean economy has successfully grown over the past 50 years because it has moved toward a new version of state led developmentalism In order to better account for the evolution of state led developmentalism this book proposes changes by competition within as well as outside the state in order to bring about changes in developmentalism and the ability to adjust to new contexts Unlike prevalent accounts of developmental state theory *Changes by Competition* argues that the state is neither unitary nor cohesive but a locus of competition
