

Asymmetric Information in a Factor Market

Initially, the buyer (of the factor labor), or the firm, has some information that the seller (of the factor) does not have; there is asymmetric information. Consequently, S_1 is the relevant supply curve. W_1 is the equilibrium wage, and Q_1 is the equilibrium quantity of labor. Then, sellers acquire the information that they did not have earlier, and there is symmetric information. The information causes the sellers to reduce their supply of the factor so that now S_2 is the relevant supply curve, W_2 is the equilibrium wage, and Q_2 is the equilibrium quantity of labor. Conclusion: Fewer factor units are bought and sold and wages are higher when there is symmetric information than when there is asymmetric information.

The Core of Economics with Asymmetric Information Ulrich Schwalbe, 1999-08-19 and should therefore constitute a part of every area of economic theory The spectrum covered by information economics today ranges from Stigler's search theory⁴ to industrial economics including oligopoly theory innovation as well as research and development⁵ However the area information economics is most closely connected with is the theory of optimal contracts mainly analyzed in principal agent models Contract theory deals primarily with the question of how optimal arrangements contracts for the purchase and sale of commodities and services between two or more agents should be structured In these models it is often assumed that the parties to the contract are informed differently or asymmetrically about relevant variables e.g. the health of one party in the case of insurance contracts or the effort in relation to employment contracts As a result of this asymmetric information phenomena such as moral hazard adverse selection signaling and screening may arise Frequently results from contract theory are referred to when making statements about the effects of asymmetric information on an economy Models of this kind are often used to explain phenomena such as fixed wages or unemployment among others⁷ However such conclusions must be treated with caution for two reasons In the first place in these models a contract explicit or implicit is determined by the solution of an optimization problem

Rationality in Economics Vernon L. Smith, 2007-11-05 The principal findings of experimental economics are that impersonal exchange in markets converges in repeated interaction to the equilibrium states implied by economic theory under information conditions far weaker than specified in the theory In personal social and economic exchange as studied in two person games cooperation exceeds the prediction of traditional game theory This book relates these two findings to field studies and applications and integrates them with the main themes of the Scottish Enlightenment and with the thoughts of F A Hayek through emergent socio economic institutions and cultural norms people achieve ends that are unintended and poorly understood In cultural changes the role of constructivism or reason is to provide variation and the role of ecological processes is to select the norms and institutions that serve the fitness needs of societies

Asymmetric Information, Corporate Finance, and Investment R. Glenn Hubbard, 2009-05-15 In this volume specialists from traditionally separate areas in economics and finance investigate issues at the conjunction of their fields They argue that financial decisions of the firm can affect real economic activity and this is true for enough firms and consumers to have significant aggregate economic effects They demonstrate that important differences asymmetries in access to information between borrowers and lenders insiders and outsiders in financial transactions affect investment decisions of firms and the organization of financial markets The original research emphasizes the role of information problems in explaining empirically important links between internal finance and investment as well as their role in accounting for observed variations in mechanisms for corporate control
