Ecosystem Services in Patagonia Pablo L. Peri, Guillermo Martínez Pastur, Laura Nahuelhual, 2021-04-29 This book aims to quantify and discuss how societies have directly and indirectly benefited from ecosystem services in Patagonia not only in terms of provisioning and cultural services but also regulating and supporting services Patagonia a region that stretches across two countries ca 10% in Chile and 90% in Argentina is home to some of the most extensive wilderness areas on our planet Natural grasslands comprise almost 30% of the Americas including the Patagonian steppe while Patagonian southern

temperate forests are important for carbon sequestration and storage play a pivotal role in water regulation and have become widely recognized for their ecotourism value However profound changes are now underway that could affect key ecosystem functions and ultimately human well being In this context one major challenge we face in Patagonia is that ecosystem services are often ignored in economic markets government policies and land management practices The book explores the synergies and trade offs between conservation and economic development as natural landscapes and seascapes continue to degrade in Patagonia Historically economic markets have largely focused on the provisioning services forest products livestock while neglecting the interdependent roles of regulating services erosion and climate control supporting services nutrient cycling and cultural services recreation local identity tourism Therefore the present work focuses on ecosystem functions and ecosystem services as well as on trends in biodiversity and the interactions between natural environments and land use activities throughout Patagonia

Human Psychology and the Destruction of the Planet Thierry Ripoll, 2025-09-30 This book sheds light on the reasons for our inaction in matters of the environmental crisis and presents solutions to address the crisis The work draws on numerous disciplinary fields such as psychology neuroscience anthropology biology philosophy sociology economics ethology The author argues that it is not possible to correctly understand the current environmental crisis in the light of a single discipline and emphasizes the importance of cognitive sciences to address the environmental crisis He shows that the reasons for human inaction relate as much to the characteristics of our psyche brain as to those of the consumption society that we invented and have lived in at least since the Neolithic The analysis presented stresses the need to regulate individual behavior and to call into question our consumption patterns Without questioning the characteristics of both modern society and the way our brains work will make it impossible to resolve the environmental crisis This book proposes a revolutionary change of the way we live and act to preserve the planet

Marine Biodiversity and Ecosystem Functioning Martin Solan, Rebecca J. Aspden, David M. Paterson, 2012-07-19 The biological composition and richness of most of the Earth's major ecosystems are being dramatically and irreversibly transformed by anthropogenic activity Yet despite the vast areal extent of our oceans the mainstay of research to date in the biodiversity ecosystem functioning arena has been weighted towards ecological observations and experimentation in terrestrial plant and soil systems This book provides a framework for extending these concepts to a variety of marine systems Marine Biodiversity and Ecosystem Functioning is the first book to address the latest advances in biodiversity function science using marine examples It brings together contributions from the leading scientists in the field to provide an in depth evaluation of the science before offering a perspective on future research directions for some of the most pressing environmental issues facing society today and in the future
