

Energy demand econometrics modelling

- **2-level hierarchy:** aggregate and disaggregate energy demand equations
- **Aggregate demand** affected by:
 - **industrial output of user industry, household spending in total, relative prices, temperature, technical progress indicator**
 - Augmented by time trends and/or **accumulated investment** to represent energy efficiency improvements
 - Some users' aggregate demands are affected by upward movements in relative prices only (ratchet or **asymmetrical price effects**)
 - In some **countries** (mainly **developing**) a **generic stochastic trend** can be created in order to cover the lack of data and/or to catch the effect of temperature, globalization, changes in economic structure, behavioral shift
- **Disaggregate energy demand** equations depend as above on:
 - activity, technology, relative price effects, temperature and generic trend
- **Error Correction Model (ECM)** - in the econometric equations- distinguishes between **long-term and adjustment parameters**

Econometrics Of Energy Demand:

Econometric Models of U.S. Energy Demand Robert Halvorsen, 1978 **Econometric Dimensions of Energy Demand and Supply** A. Bradley Askin, John Kraft, 1976 **The Econometrics of Energy Systems** Jacques Girod, Jan Horst Keppler, 2006-12-14 The complexity and volatility of energy markets creates strong demand for quantitative analysis and econometric techniques This book offers an introduction to the state of the art in econometric modelling applied to the most pertinent issues in today's energy markets for a better understanding of the working of energy systems and energy economics *The Econometrics of Energy Demand* William A. Donnelly, 1987-07-13 The energy crisis is the background for this insightful volume which brings together several important strands of energy modeling work into an integrated unit The Econometrics of Energy Demand successfully ties together within a general policy modeling context models which assist in developing policy alternatives as well as those which incorporate variables over which the decision maker may exercise control The process of model development includes problem identification model selection database construction implementation and documentation Energy Demand in Asian Developing Economies M. Hashem Pesaran, Ron Smith, Takamasa Akiyama, 1999 This text reviews the relevant economic and econometric theory introduces some econometric techniques and uses these techniques to analyse energy demand in the Asian developing economies individually and taking the region as a whole **Econometric Studies in Energy Demand and Supply** G. S. Maddala, Wen S. Chern, Gurmukh Singh Gill, 1978 **Econometric Models of the Demand for Energy** John R. Moroney, 1984

Analyzing Demand Behavior Douglas R. Bohi, 2013-11-26 First Published in 2011 This title takes econometric studies as data it examines their assumptions investigates their methodologies contrasts the data sets they use and compares their results By informing users what they can and cannot expect from researchers it can sharpen the criteria that are used to commission such studies and judge their results By examining an array of studies dealing with the same or related phenomena Bohi can analyse the ways in which decisions made by researchers affect their results All while considering inferences surrounding the role of econometric demand estimation in formulating policy and understanding demand behavior

New Directions in Econometric Modeling of Energy Demand Glenn D. Westley, 1992 0 The Econometrics of Energy Demand Arthur Thomas, 2020 The prevention of climate change is one of the priorities of the world energy policy that aims to massively reduce greenhouse gas emissions Faced with these challenges it is striking to note that our knowledge of energy demand modeling remains limited because it is largely based on old empirical work and methodologies that are now dated Therefore the objective of our work is twofold First we analyze quantitatively the economic determinants of energy demand Second we develop new forecasting models This thesis is structured in four chapters The first chapter shows that natural gas consumption in France can be predicted using a simple model which only includes public information that is available to market's participants This chapter proves the existence of a long term relationship between demand and prices of other

energies and provides estimates of their marginal impacts on observed demand levels The second chapter empirically investigates the role of temperature in forecasting gas prices in the US It develops a methodology to build a new monthly index based on temperature This index captures variations in residual demand for natural gas in real time It is used as an additional exogenous variable in structural models VAR to improve forecasts and we show that in our case predictive models derived from a structural model are enhanced relying on true real time not subject to revisions data The third chapter proposes to use in the case of oil market a structural model capturing expectations in a noncausal VAR framework and to properly identify the reactions of oil key variables to supply news shock The fourth chapter revisits the predictive power of oil and gas convenience yield by incorporating expectations into an empirical specification through non causal VAR based on the theory of storage which delivers very competitive price predictions in a simple bivariate setting

Energy Abstracts for Policy Analysis, 1986 Microeconomic Modeling and Policy Analysis Thomas G. Cowing, Daniel L. McFadden, 2013-10-22 *Microeconomic Modeling and Policy Analysis* Studies in Residential Energy Demand analyzes the aggregates and distributional impacts from alternative energy policies related to the energy demands of residential consumers. The book also analyzes the use of micro simulation models in the study. The book examines three alternative energy policies and their possible impacts on the residential energy demand. The text describes models on energy use including general micro simulation and micro simulation as applied in Residential End Use Energy Planning Systems REEPS and the Oak Ridge National Laboratory ORNL Residential Energy Consumption Model. The book describes REEPS as a model providing end use specific forecasts of energy consumption at the household level. The text describes ORNL as a computationally simpler design but conceptually more complex one. The book then evaluates three different policy scenarios using each of these two models. The performance of REEPS and ORNL as well as other dimensions of model projections is examined. The implications regarding 1 policy analysis and 2 the use of micro simulation models are noted. The book then presents a table that summarizes the results of the comparative model evaluation. Energy policymakers, city and local government planning officials, development engineers and environmentalists will find this book very relevant.

Global Warming and Energy Demand Terry Barker, Paul Ekins, Nick Johnstone, 2005-08-10 This book presents a range of current views on the use of economic measures to control greenhouse gas emissions. The authors discuss the responsiveness of the energy market to changes in prices, taxes and incomes. The book's concern with global warming involves analyses of possible energy use both in the long and short term.
