G. Brookes, 2013-12-11 When we first contemplated a book on this subject we were faced with a number of options a to write it all ourselves which would have had the merit of internal consistency and continuity of style b to produce a collection of existing papers which would have given us expert views in the various sub fields of the economics of nuclear energy and would have put us in the

position of knowing from the start exactly what the authors contributions would be c to commission contributions from individual specialists chapter by chapter or d some combination of these options We settled for the last we have written some of the material ourselves have obtained permission to use some existing papers that seem to us to be valuable contributions to the subject and have been fortunate in persuading a number of eminent people in their fields to produce papers especially for the book This has given us a great deal of work and taken up more time than we planned for but we believe the result justifies this time and effort It enabled us to design a structure for the book from the outset recognizing that there are several aspects to the economics of nuclear energy especially if we take a broad view of what is embraced by the word economics

Atomic Power Corbin Allardice,1957 *Atomic Energy Costing* Warren Young,2012-12-06 In the centennial year of the birth of Sir John Cockcroft first master of my Cam bridge College Churchill and the first man to split the atomic nucleus by artificial means it is indeed relevant to consider the outcome of his efforts at developing atomic power From the earliest days of the construction of Calder Hall the first nuclear power station in Britain and the establishment of the British Atomic Research Center at Harwell and the Chalk River Nuclear Station in Canada through the Windscale nuclear accident in Britain up to the present when some 20% of UK energy is derived from nuclear power the Cockcroft legacy is felt As the British historian Mark Goldie put it in the pure and sanguine 1950s Cockcroft had almost absolute faith in peaceful atoms and in the boundless almost cost free energy that atoms would soon produce Goldie 1997 p 21 But as the eminent economist Frank Hahn recalled the only failing Cockcroft had was that he wasn't up to much in economics Indeed Hahn recalled that he had to explain to Cockcroft the economic notion of optimum durability as it related to the interest rate in the context of building Churchill College with hand made bricks After his explanation as Hahn recalled Cockcroft smiled and proceeded to order more hand made bricks Hahn 1997 p 27
