Revolution in Historical Time Paul W. Rhode, Joshua L. Rosenbloom, David F. Weiman, 2011-01-28 This book challenges the static ahistorical models on which Economics continues to rely These models presume that markets operate on a frictionless plane where abstract forces play out independent of their institutional and spatial contexts and of the influences of the past In reality at any point in time exogenous factors are themselves outcomes of complex historical processes They are shaped by institutional and spatial contexts which are carriers of history including past economic dynamics and market outcomes To examine the connections between gradual evolutionary change and more dramatic revolutionary shifts the text takes on a wide array of historically salient economic questions ranging from how formative European encounters reconfigured the political economies of indigenous populations in Africa the Americas and Australia to how the rise and fall of the New Deal order reconfigured labor market institutions and outcomes in the twentieth century United States These explorations are joined by a common focus on formative institutions spatial structures and market processes Through historically informed economic analyses contributors recognize the myriad interdependencies among these three frames as well as their distinct logics and temporal rhythms [The Oxford Handbook of American Economic History, vol. 2](#) Edited by Louis P. Turk,2015-08-11 How scientific is economics This question has often been framed by analogies and correspondences made between economics and other seemingly more well established scientific disciplines starting with classical mechanics At the same time economics is likely to be seen in opposition to or in contrast with history where the reliance upon generalizing rules thought experiments and model construction in economics is set against the amassing of particular facts intended to create narratives in history In this new volume Turk explores the relationship between economics and history including the often fraught one between economics and economic history making the case that economics does in fact require the proper grounding in history that has so often been ignored This work challenges the attempt to link economics with other more clearly scientific disciplines as flawed and fundamentally wrongheaded A key element of this book is its examination of the

gaps and associations that exist in or are seen through linkages with thermodynamics classical mechanics biology literature mathematics philosophy and sociology This exploration is frequently undertaken through study of the work of one or more major figures in the history of economic thought ranging from Quesnay and Smith through Walras and Max Weber to Robinson Krugman David and Arthur Through the possibility of an alternative to the gaps noted in each such comparison the underlying necessary connection between economics and history can be brought out The book concludes by exploring the basis for the positive construction of a historical economics This book is suited for those who study history of economic thought and philosophy of economics

The Market Power of Technology Mordecai Kurz, 2023-01-03 Since the 1980s the United States has regressed to a level of economic inequality not seen since the Gilded Age in the late nineteenth century At the same time technological innovation has transformed society and a core priority of public policy has been promoting innovation What is the relationship between economic inequality and technological change Mordecai Kurz develops a comprehensive integrated theory of the dynamics of market power and income inequality He shows that technological innovations are not simply sources of growth and progress they sow the seeds of market power In a free market economy with intellectual property rights firms control over technology enables them to expand attain monopoly power and earn exorbitant profits Competition among innovators does not eliminate market power because technological competition is different from standard competition it results in only one or two winners Kurz provides a pioneering analysis grounded on quantifying technological market power and its effects on inequality innovation and economic growth He

outlines what causes market power to rise and fall and details its macroeconomic and distributional consequences Kurz demonstrates that technological market power tends to rise increasing inequality of income and wealth Unchecked inequality threatens the foundations of democracy public policy is the only counterbalancing force that can restrain corporate power attain more egalitarian distribution of wealth and make democracy compatible with capitalism Presenting a new paradigm for understanding today's vast inequalities this book offers detailed proposals to redress them by restricting corporate mergers and acquisitions reforming patent law improving the balance of power in the labor market increasing taxation promoting upward mobility and stabilizing the middle class

An Economic History of the First German Unification

Ulrich Pfister, Nikolaus Wolf, 2023-03-27 There is a striking chronological parallel between Germany's transition from a post Malthusian regime to modern economic growth and the formation of a modern nation state between the late 1860s and the early 1880s which culminated in the events of 1871 The central question of this book is whether and how such state formation did in fact contribute to economic development Twenty chapters written by leading experts in their respective fields deal with various aspects of the book's main question Together they identify three channels by which national unification contributed to Germany's economic development 1 Creation of a nation state completed a process of institutional Unification of a large inland area and thereby increased the integration of domestic markets 2 Unification raised the capacity of the political system with respect to regulating complex domains such as stock companies patenting and social insurance 3 The emerging political regime of market preserving federalism promoted the quality of economic institutions Moreover a set of chapters dealing with the experience of other European economies apart from Germany during the second half of the nineteenth century highlight additional factors in nineteenth century economic development most notably the first wave of modern globalization and economic geography Readers interested in the history of state building and the economic history of Germany and of Europe in general during the age of industrialization and globalization and students of the economic effects of political integration and decentralized state growth will all gain much from this book
