Ukraine, Russia and the West Stefan Hedlund, 2023-04-28 Why did Russia's all out war against Ukraine come as such a surprise to the West This is a key question considered by this reflective and wide ranging book The book argues that Russia and the West were playing different games while Russia under Putin had become obsessed with using hard power to restore the Cold War security architecture in Europe the major Western powers had become equally obsessed with value promotion that would ensure a global triumph for the values of the West touted as universal values The Russian play for spheres of interest was clearly defined and demarcated the Western play for values was by definition without limits Hence there could be no common ground no constructive communication and no common understanding While Russia convinced itself that it would be successful in forcing the West to accept its claims for a new security order based on hard power Western governments deluded themselves into believing that value promotion would transform Russia into a liberal democracy and a rules based market economy Examining the full situation exploring political military economic and business spheres the book provides a deep analysis of how the present confrontation has come about

Saving Across the World Klaus Schmidt-Hebbel, Luis Servén, 1997-01-01 World Bank

Technical Paper No 349 The Bank's approach to water resources development has shifted from one of construction activities to one of improved management quality creating a new generation of water related projects and the need for new evaluation procedures This paper addresses the methodology for economic evaluation of this new group of projects and draws on the experience of the recently approved Mexico Water Resources Management project *Investment in Developing Countries* Alberto E. Isgrt,1997-10 The enhanced access of developing countries to the international financial market since the seventies has been characterized by boom bust cycles of unfettered external borrowing followed by abrupt financial crises The first chapter analyzes the macroeconomic effects of volatile capital flows to a developing country The analysis shows that investment consumption and the current account deficit depend positively on the expected availability of external finance If international investors may unexpectedly decide to reduce their exposure to financial assets issued by the country the optimal cost of external borrowing should exceed the interest rate paid by domestic residents in the international financial market In the absence of insurance markets for this type of risk a tax on capital inflows can be optimal Recent endogenous growth models characterize a firm's technology as a commodity which is both partly excludable and associated with some production inputs such as human capital and equipment The second chapter explores the nature of the link between equipment investment and technology at the plant level in a large sample of Colombian manufacturing establishments The results support the endogenous growth model's notion that technology is associated with the production inputs Larger plants that invest more in machinery and equipment and employ higher levels of human capital tend to be more efficient Models of investment with non convex costs of adjustment predict that microeconomic time series of investment may be characterized by infrequent investment spurts and prolonged periods of little or no investment In the third chapter I study the pattern of investment at the plant level in different categories of capital goods As in the U S plant level investment in Colombia is lumpy and the probability of observing a large investment episode depends positively on the time elapsed since the latest large investment episode As a contribution to the literature I propose and implement two alternative econometric methods for the estimation of a simple model of irreversible investment The results show that increases in the real exchange rate pesos per dollar have a consistently negative effect on investment regardless of the type of capital good *The Transformation of the Communist Economies* Ha-Joon Chang,Peter Nolan,2016-07-27 The mainstream view of the way in which best to transform the communist economies was that there should be a rapid transition to a free market economy and political democracy The articles in this book challenge this view They do so from the standpoint of economic and political theory and from an evaluation of the comparative experience of different reforming countries in Europe and Asia This book represents the first systematic attempt to try to explain the dramatic contrast in outcome between reforming countries that have pursued comprehensive system reform and those that have pursued cautious experimental strategies **The Economies of Latin America** César Yáñez,2015-10-06 The economic backwardness of Latin America and the Caribbean has long been discussed

but seldom been the subject of such a wide ranging quantitative study The twelve essays in this collection present a twenty first century analysis of a long term issue providing extensive geographical coverage and allowing reinterpretations of the past

The Political Economy of Reform Federico Sturzenegger, Mariano Tommasi, 1998 In this book Federico Sturzenegger and Mariano Tommasi propose formal models to answer some of the questions raised by the recent reform experience of many Latin American and eastern European countries

Barriers to International Technology Transfer J. Kirkland, 1996-11-30 The importance of technology transfer to innovation and wealth creation is now recognised by most governments As the policy debate has intensified however it has

become clear that the problem of encouraging successful transfer is complex and requires an interdisciplinary approach. The collection of papers in this volume is deliberately diverse. It offers perspectives from economics, sociology, science, engineering and public administration and also from outside academic life from those involved at the sharp end of technology licensing and administering government research programmes. Contributions are also drawn from a range of national backgrounds; the authors are drawn from ten countries from throughout Europe and North America. The main focus for the papers was a NATO Advanced Study Workshop which took place at the National Institute of Economic and Social Research, London, in September 1995. Unfortunately, time and space has prevented all of the contributions appearing here but all those who attended played an important role in making the event such a success. Thanks are also due to Dr Alain Jubier and his colleagues at NATO without whose support and advice the seminar could not have taken place to my fellow organising committee members Dr Katalin Balazs, Dr Linda Parker and Professor Steve Woolgar and to Monica Miglior who, in addition to assisting in the conference organisation, provided detailed notes on sessions which helped greatly in later analysis.

American Corporate Economy William Lazonick, 2002. The readings collected in these four volumes examine the evolution, operation and performance of the American corporate enterprise and the American corporate economy more generally. Divided into seven sections, many of the readings provide broad overviews of the evolution of the US corporate enterprise while others contribute to debates on its role in the evolution of American economy and society. The material is arranged thematically to help the reader navigate the field. There is also a new introduction and a thorough index making this set an invaluable resource for both academics and practitioners in the field.

Investment, Growth and Employment Ciaran Driver, Paul Temple, 2005-08-10. This volume presents studies to explain international investment behaviour and assess its impact on growth and jobs. The authors also examine policy measures to reverse the climate of low investment that has characterised recent years.

Does Atlas Shrug? Joel Slemrod, 2000. Since the introduction of the income tax in 1913, controversy has raged about how heavily to tax the rich. Opponents of high tax rates claim that heavy assessments have negative incentives on the productivity of some of our most talented citizens; supporters stress the importance of the rich shouldering their fair share and decry the loopholes that permit many to escape their obligations. Notably absent from this debate is hard evidence about the actual impact of taxes on the behavior of the affluent. This book presents evidence by leading economists of the effects of taxes on the formation of businesses, the supply of labor, the form of executive compensation, the accumulation of wealth, the allocation of portfolios and the realization of capital gains. Among its findings are that the labor supply of the rich remained unchanged in the face of large tax cuts in 1986 and that in late 1992 executives exercised billions of dollars worth of stock options in order to beat the tax increases expected in 1993. The book also presents a history of efforts to tax the rich, a demographic snapshot of the financially affluent and a road map to widely used tax avoidance strategies. *Does Atlas Shrug?* will be of great interest to policymakers and interested citizens who want to know how

much tax revenue could really be gained by increasing tax rates on the rich or whether low capital gains tax rates really spur economic growth San Diego-Tijuana in Transition Norris C. Clement, Eduardo Zepeda Miramontes, 1993
