Theory of Gender and Population Change Wei-Bin Zhang, 2025-01-10 This book proposes an economic theory of gender and population change by integrating neoclassical and new economic theories Modern economies are characterized by complicated dynamic interdependence between many variables such as population growth human capital accumulation wealth accumulation gender division of labor children caring environmental changes various types of conflicts wars and so on However modern dynamic economic theories deal with simplified interdependence between a few variables Any genuine modeling of economic dynamics result in high dimensional nonlinear dynamics Nevertheless it is only in recent years that it is possible to examine the behavior of highly dimensional dynamics This partly explains why economic theory has been

dominated by modeling dynamic economic systems with a few variables with linear linearized relations Since Malthus published his *An Essay on the Principle of Population* in 1798 economists have made great efforts to reveal the dynamic complexity of population change Modern economies have experienced unprecedented population dynamics No one in human history could even have rationally predicted the natural declination of the national population in modern times These failures in predicting family structural changes and life expectancy lead to many socioeconomic problems such as health costs in association with aging and pension systems that many societies fail to be prepared for This book contributes to the literature on macroeconomics based on microeconomics neoclassical growth theory new growth theory and family economics by integrating some important ideas in neoclassical growth theory and family economics This book extensively applies the ideas in the literature to deal with the complexity of population change

Institutions and Economic Theory Eirik Grundtvig Furubotn, Rudolf Richter, 2000 A comprehensive introduction to and critical assessment of the theory and applications of the New Institutional Economics

Economic Theories, Protagonists and Facts Maria Cristina Marcuzzo, 2024-12-18 This book brings together the work of Maria Cristina Marcuzzo and highlights her investigations into the history of economic thought and her quest for an alternative economic thinking Following an extended introduction that contextualised her ideas and highlights consistent themes throughout the volume it discusses the theoretical and methodological approaches that have come to define the history of economic thought as a discipline The work of David Ricardo is then debated alongside ideas of money and monetary systems Finally the impact of the Cambridge economists is presented with a particular focus on Luigi Pasinetti Joan Robinson Piero Sraffa and John Maynard Keynes This book combines theoretical discussions with historical analysis biographical narratives and original archival research to provide rich insights into the history and impact of economics It will be of interest to students and researchers working within the political economy and the history of economic thought

Community, Culture, and Economic Development Meredith Ramsay, 1996-01-01 A comparative study of economic development policy and its relationship with local power structures and cultural and social relations in two Maryland towns that have rejected development

Entrepreneurship As Social Change Chris Steyaert, Daniel Hjorth, 2008-01-01 a reflective and scholarly work that presents exciting and challenging views to mainstream entrepreneurship The four books comprising the series would certainly be a valuable addition to any entrepreneurship library However each book also stands alone as an individual purchase Lorraine Warren *International Journal of Entrepreneurial Behaviour and Research* The narrative and flow of the book is superb and very interesting to read The book is well edited and thought provoking which makes it an interesting read Vanessa Ratten *Journal of Enterprising Communities People and Places in the Global Economy* This book the third in the *Movements in Entrepreneurship* series examines entrepreneurship as a societal phenomenon It provides an in depth study of the social aspects of entrepreneurship illustrating how entrepreneurship affects society The need to move beyond economy to disclose entrepreneurship in its societal forms is

demonstrated as is the relevance of our understanding of entrepreneurship as a societal phenomenon The contributors show that entrepreneurship is a society creating force and as such it evokes new questions for entrepreneurship research and attempts to engage with new theoretical formulations They begin with discussions on early Schumpeter and a rhetorical analysis of the current academic literature on social entrepreneurship They go on to present myriad contextual examples of how entrepreneurship can shape social change and indicate how this is initiated through various social settings relationships and communities Through rich empirical work this book explores the social of social entrepreneurship and in doing so shows us how entrepreneurship is at home where society is created As such it will prove a fascinating read for academics researchers and students with an interest in entrepreneurship sociology and economic sociology

Social Limits to Economic Theory Jonathan D Mulberg, 2005-09-26 Modern economics makes much of its claim to be impartial objective and value free but it is unable to address our most immediate problems such as widespread environmental degradation and persistent poverty In *Social Limits to Economic Theory* Jon Mulberg argues for a new progressive political economy based on notions of community and justice and incorporating environmental and ethical considerations In doing so he provides the best introduction to date to critical non orthodox economics *Advanced Economic Theory LPSPE* HL Ahuja, 2019 This authoritative and comprehensive text is an advanced treatise on microeconomics Featuring simplified mathematical treatment the book covers a wide spectrum of theories and concepts aimed at effective understanding of advanced economic theory This revised edition explores further the concept of economic efficiency and the concept of utility and its critique by Prof Amartya Sen It further includes an incisive analysis of Hicksian and Slutsky substitution effect The revision also includes important distinctions and critical analysis of several functions expositing the latest developments in the field

Evolutionary Theories of Economic and Technological Change (Pier) Paolo Saviotti, Stan Metcalfe, 2018-03-29 Recently evolutionary theories of economic and technological change have attracted a considerable amount of attention which reflects the problems encountered by mainstream analysis of dynamic phenomena and quantitative change This book originally published in 1991 develops the debate and draws on the concepts of evolutionary biology nonequilibrium thermodynamics systems and organization theory While recognizing that new technology is not the cause of quantitative change the editors claim it should play a more central role in economic theory and policy At the same time the ground is laid for a more generalized concept of innovation and experimentation and their relation to routine activities The book is intended for economists

Dilemmas in Economic Theory : Persisting Foundational Problems of Microeconomics Michael Mandler Associate Professor of Economics Harvard University, 1999-01-29 By examining the development of economics in the 20th century this book argues that the breakthroughs of post WWII general equilibrium theory and its rejection of utilitarianism and marginal productivity have been misunderstood Mandler maintains that although earlier neoclassicism deserved criticism current theory does not adequately address the problems the discarded concepts were designed to solve

and that intractable dilemmas therefore appear **Economic Theory and the Cities** J. Vernon Henderson, 2014-06-28 The Second Edition of *Economic Theory and the Cities* has been revised and expanded with both the graduate student and the practicing professional in mind Providing a state of the art synthesis of important theoretical topics in urban economics the volume emphasizes the fundamental links between urban economics and new developments in mainstream economic theory From the Preface In this book I present what I believe to be the most important theoretical topics in urban economics Since urban economics is a rather diffuse field any presentation is necessarily selective reflecting personal tastes and opinions Given that I note on what basis I chose the material that is presented and developed First the basic spatial model of a monocentric city is presented since it lays the foundation for thinking about many of the topics in urban economics The consideration of space and spatial proximity is one central feature of urban economics that distinguishes it from other branches of economics The positive and negative externalities generated by activities locating in close spatial proximity are central to analysis of urban phenomena However in writing this book I have tried to maintain strong links between urban economics and recent developments in mainstream economic theory This is reflected in the chapters that follow which present models of aspects of the most important topics in urban economics externalities housing transportation local public finance suburbanization and community development In these chapters concepts from developments in economics over the last decade or so are woven into the traditional approaches to modeling these topics Examples are the role of contracts in housing markets and community development portfolio analysis in analyzing housing tenure choice and investment decisions the time inconsistency problem in formulating long term economic relationships between communities developers and local governments search in housing markets and dynamic analysis in housing markets and traffic scheduling The book ends with chapters on general equilibrium models of systems of cities demonstrating how individual cities fit into an economy and interact with each other This book is written both as a reference book for people in the profession and for use as a graduate text In this edition a strong effort has been made to present the material at a level and in a style suitable for graduate students The edition has greatly expanded the sections on housing and local public finance so these sections could be studied profitably by a broad range of graduate students Recommended prerequisites are an undergraduate urban economics course and a year of graduate level microeconomic theory It is possible that the book can be used in very advanced undergraduate courses if the students are well versed in microeconomics and are quantitatively oriented Focus on the basic spatial model of the monocentric city Expanded sections on housing and local public finance Discussion of the critical role of spatial proximity of different economic activities such as housing transportation and community development
