*Frontiers of Fundamental Physics* M. Barone, F.

Selleri,2012-12-06 The Olympia conference Frontiers of Fundamental Physics was a gathering of about hundred scientists who carryon their research in conceptually important areas of physical science they do fundamental physics Most of them were physicists but also historians and philosophers of science were well represented An important fraction of the participants could be considered heretical because they disagreed with the validity of one or several fundamental assumptions of modern physics Common to all participants was an excellent scientific level coupled with a remarkable intellectual honesty we are proud to present to the readers this certainly unique book Alternative ways of considering fundamental matters should of course be vitally important for the progress of science unless one wanted to admit that physics at the end of the XXth century has already obtained the final truth a very unlikely possibility even if one accepted the doubtful idea of the existence of a final truth The merits of the Olympia conference should therefore not be judged a priori in a positive or in a negative way depending on one s refusal or acceptance respectively but considered after reading the actual of basic principles of contemporary science new proposals and evidences there presented They seem very important to us

The Permian of Northern Pangea Peter A. Scholle,Tadeusz M. Peryt,Dana S. Ulmer-Scholle,2012-12-06 The Permian was a remarkable time period It represents the maximum stage of Pangean continental assembly includes a major global climatic shift from glacial to nonglacial conditions icehouse greenhouse transition and is ter minated by one of the most profound faunal floral extinction events in the Earth s history In addition Permian oceans although poorly understood must have had some quite unique characteristics Permian seas reached the most extreme values of carbon sulfur and strontium isotopic ratios ever achieved in Phanerozoic time and the isotopic ratios of all three elements abruptly returned to more normal values at or very close to the Permo Triassic boundary Finally the Permian is marked by an abundance of important sedimentary mineral resources It has large fossil fuel concentra tions coal oil and natural gas enormous phosphate reserves and very extensive evaporite deposits including gypsum anhydrite and halite as well as a variety of potash salts Study of the Permian has been hampered however by a number of factors These include a scattered geologic literature presented in a variety of languages a confusing regional and global stratigraphic framework based in part on inadequate type sections and largely provincial often poorly correlatable faunas All have contributed to the sparsity and inadequacy of overviews of this critical geological interval The two volumes attempts to bring together some of the widely scattered observations about these fascinating rocks at least for the northern pre dominantly nonglacial parts of Pangea

**Large Igneous Provinces from Gondwana and Adjacent Regions** S. Sensarma,B.C. Storey,2018-02-19 Gondwana comprising more than 64% of the present day continental mass is home to 33% of large igneous provinces LIPs and key to understanding the lithosphere atmosphere system and related tectonics that influenced global climate and sediment production on Earth Gondwana has many of the largest LIPs with areas of 200 000 to 2 000 000 km<sup>2</sup> Several Gondwana LIPs erupted near active continental margins as well as within continents The rifting of continents continued even after LIP emplacement or was aborted by a

coeval compression and did not open into an ocean Important contemporary frontiers include understanding significant amounts of synchronous silicic volcanic rocks in mafic LIPs bringing better stratigraphic constraints supported by precise age dating and volume estimation of LIPs the possible link between LIP emplacement and biotic crisis refinement of the existing petrogenetic models and assessing large eruptions and associated societal risk This volume covers topics on magma emplacements petrology and geochemistry source characteristics flood basalt carbonatite linkage tectonics and geochronology of LIPs distributed in Gondwana continents    **The Triassic-Jurassic Terrestrial Transition** Jerry D.
