Golden Of Monkeys Apes And Other Primates:

The Golden Book of Monkeys, Apes, and Other Primates Maida Silverman,1991 Introduces primates from around the world including the loris snow monkey pigmy marmoset and gibbon **The Golden Book of Monkeys, Apes, and Other Primates** Maida Silverman,1991-07-01 Introduces primates from around the world including the loris snow monkey pigmy marmoset and gibbon **A Complete Guide to Monkeys, Apes and Other Primates** Michael Kavanagh,1984 **The Thinking Ape** Richard W. Byrne,1995 This text describes how human ancestors reached the point in cognitive evolution from which the evolution of modern humans was possible Rather than speculating about the mental abilities of fossil hominids on the basis of modern human psychology the author explores earlier phases of evolution with the more solid and testable evidence of human ancestry that is still alive modern primates and other animals **Primate Sexuality** Alan F. Dixson,2012-01-26 Primate Sexuality provides a synthesis of current research on the evolution and physiological control of sexual behaviour in the primates prosimians monkeys apes and human beings This new edition has been updated and greatly expanded throughout to incorporate a decade of new research findings Nobel Universal Graphical Language Milan Randic,2010-05-24 Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined It is named after Alfred Nobel 18331896 Swedish chemist and industrialist inventor of dynamite who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind known as Nobel Prizes Besides the awards for sciences and literature significantly Alfred Nobel included among others a prize for peace that besides individuals also organizations may obtain Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve the emergence of universal languages certainly cannot make the situation worse Universal languages are a communication tool which makes it possible for people of no common language to communicate They are graphic but they should be distinguished from picture writings which only passively offer information on some event or give messages Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians who spoke different languages and could communicate by sign language that they developed However written language has some advantages over hand sign languages in that one can communicate at a great distance particularly today in the age of fax and computer communications and that one can leave messages for posterity This is not the place to argue for or against the promise of written sign languages Graphic written sign languages exist today and the best known are Chinese characters used in China and Japan The problem with Chinese characters is that there are too many characters and it is difficult to learn so many It takes years for children in China and Japan to learn so many different characters and the task would be even harder for grown people to learn if they have not done this when young Nobel is designed to remove this difficulty and is based on the following requirements 1 SMALL NUMBER OF BASIC SIGNS 2 SIGNS SHOULD BE EASY TO RECOGNIZE 3 SIGNS

SHOULD BE EASY TO REPRODUCE 4 COMBINATIONS LIMITED TO THREE SIGNS 5 COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs which can be viewed as a small number particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed The other requirements are also very important There are many signs that can be easily recognized but in order to be acceptable for Nobel they also need to be easily reproduced because that will facilitate communication Also when making combinations of signs one has to make some restriction in order to maintain clarity so we decided to have no more than three signs combined into single word Finally the last requirement that of complementarities needs some explanation Besides having signs that one can easily recognize and easily draw one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily We refer to this structure as complementary or broadly speaking associational and what it implies is that words and objects that are related should have related signs Thus for example pairs of words like man woman cat dog coffee tea good bad love hate etc should have signs that are in some opposition while words like smoke flame fire tree wood forest water sea ocean good better best should have signs that are in competition With this in mind when one sees and learns the basic signs the meaning of many combinations of signs can be in advance anticipated This helps one to learn Nobel rather fast not months not weeks perhaps not even days but a couple of hours may suffice that one may learn hundreds and hundreds of words In this respect Nobel may be unique among languages written spoken of [Understanding the Prefrontal Cortex](#) Richard Passingham,2021 This chapter explains why this book is organized as it is Each neocortical area has a unique pattern of inputs and outputs This means that the challenge is to understand the transformation that each of the prefrontal areas performs from input to output Functional brain imaging allows us to visualize the human brain at work but it does not have the spatial resolution to identify the mechanisms that support the transformations that the brain performs It is neurophysiological recordings from cells that tell us how these are achieved Chapters 3 8 are therefore mainly devoted to studies that have been carried out on the prefrontal cortex of macaque monkeys because the methods are necessarily invasive Apart from recording the methods include making selective lesions in an area it is these that identify the contribution that is unique to that area The book ends by reviewing the evolution of the human prefrontal cortex and the final two chapters discuss the ways in which the human prefrontal cortex is specialized in terms of function In doing so they attempt to account for the intellectual gap between humans and other primates Provided by publisher **The publishers weekly** ,1991 [Picturepedia](#) DK,2015-10-06 Experience all the world s wonders at once in the ultimate children s encyclopedia Spilling over with history science space nature and much much more this visual reference guide comes complete with more than 10 000 stunning photographs illustrations and maps Every page is a mini encyclopedia at your fingertips perfectly designed to educate engage and entertain From microscopic insects to the Big Bang theory Picturepedia explains every subject under and including the Sun to satisfy the curious minds of young readers Discover the secrets of prehistoric life explore the inner workings of the human
