Defeating Autism Michael Fitzpatrick, 2008-10-27 Autism disease disorder or difference What causes autism genes or environment Can biomedical treatments cure autism and are they safe An increased public awareness of autism has resulted in a rising trend of diagnoses creating the impression of an epidemic Many parents of children newly diagnosed with autism have been impressed by plausible theories blaming vaccines and other environmental causes Many have also been captivated by claims that biomedical treatments including special diets and supplements detoxification and medications can achieve dramatic results In *Defeating Autism* Michael Fitzpatrick a family doctor and father of a son with autism questions the scientific basis of environmental explanations of autism and exposes the incoherence of unorthodox biomedical theories and therapies This book reveals that these therapies are far from pioneering interventions and they remain unsubstantiated by scientific authorities Campaigns promising to defeat or cure autism now have attracted much support among parents struggling with their difficult children But the crusade against autism risks dehumanising and stigmatising those who are identified as autistic and their families This compelling book is essential reading for students and professionals working in the field of autism as well as academics concerned with the public understanding of science and the treatment of scientific and medical controversies in the media

Natural Moralities : A Defense of Pluralistic Relativism Department of Philosophy Duke University David B. Wong Professor and Chair,2006-09-07 David B Wong proposes that there can be a plurality of true moralities moralities that exist across different traditions and cultures all of which address facets of the same problem how we are to live well together Wong examines a wide array of positions and texts within the Western canon as well as in Chinese philosophy and draws on philosophy psychology evolutionary theory history and literature to make a case for the importance of pluralism in moral life and to establish the virtues of acceptance and accommodation Wong s point is that there is no single value or principle or ordering of values and principles that offers a uniquely true path for human living but variations according to different contexts that carry within them a common core of human values We should thus be modest about our own morality learn from other approaches and accommodate different practices in our pluralistic society

Indirect Parenting Interventions,

Neuroscience and the Parent-Child Relationship Thomas W. Roberts, 2024-10-21 This volume explores indirect parenting behavior that changes the structure of the parent child relationship examining the ecological dimension of parenting in addition to nurturance and control Drawing on neuroscientific research in parenting it provides a model for how children learn implicitly and how parents can relate to children through indirect means Roberts argues that first order parenting techniques teaching specific behaviors to reduce unwanted child behaviors are overused He examines and offers guidance on how indirect interventions that place emphasis on the interactional components of the parent child relationship such as modelling storytelling reframing humor and paradox can support parents and children in developing positive relationships Addresses the latest brain research and its application to parent child interactions Introduces the student to aspects of the parent child relationship that are not covered in most courses Useful to clinicians who work directly with parents Offers a perspective on parenting that differs from most parenting models Facilitates awareness of how unconscious and nonverbal communication affects parenting Serves to deepen the relationship with the child and curb unwanted behavior Indirect Parenting Interventions Neuroscience and the Parent Child Relationship will be thought provoking reading for students and scholars of parenting and family systems as well as clinicians who work directly with parents giving them a broader perspective in dealing with parent child interactions The Foundations of Flourishing and Our Responsibility to Infants

Gillian Joiner, 2023-11-25 Neuroscientific evidence reveals that childcare centres are high stress environments which can disrupt the brain's emotional developmental circuitry during critical phases impacting a child's later ability to flourish At the same time evidence also reveals that some parenting practices are sub optimal Exploring what it is infants really need to grow emotionally well represents a largely unexplored issue If the state wants to be populated by flourishing individuals then this topic must be addressed Using an ethical framework to tease out the wide ranging complex and sometimes controversial issues that this dilemma presents The Foundations of Flourishing and Our Responsibility to Infants follows a cross disciplinary journey The author pieces together pertinent issues in a synthesised critique of political feminist and moral philosophy as well as psychological and neuroscientific findings and offers some possible solutions It will be of interest to researchers and teachers in areas including philosophy psychology education social care as well as educators and policy makers in early childhood development
