field Alternative Models of Addiction Hanna Pickard, Serge H. Ahmed, Bennett Foddy, 2015-12-07 For much of the 20th century theories of addictive behaviour and motivation were polarized between two models The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly The second model in contrast viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use and over which addicts have no choice or control As our capacity to observe neurobiological phenomena improved the second model became scientific orthodoxy increasingly dominating addiction research and informing public understandings of addiction More recently however a dissenting view has emerged within addiction research based partly on new scientific research and partly on progress in philosophical and psychological understandings of relevant mental phenomena This view does not revert to treating addiction as a moral failure but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control On this alternative model of addiction addictive behaviour is an instrumental means to ends that are desired by the individual although much controversy exists with respect to the rationality or irrationality of these ends the degree and nature of the voluntary control of addictive behaviour and motivation the explanation of the difference between addictive and non addictive behaviour and motivation and lastly the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased This research topic includes papers in the traditions of neuroscience psychology philosophy law and social science that explore alternative understandings of addiction The Overweight Patient Kathy Leach, 2006-06-15 The book explores the underlying beliefs and behaviours that may contribute to obesity including psychological needs addiction fear of deprivation parental influences and sexual fears The author draws a useful distinction between the need to eat and the need to maintain a large body size and addresses both LT obesity and ST weight gain **Nutrition** Rudolf Steiner, 2013-04-17 Our instinctive knowledge of which foods are helpful and which are harmful appears increasingly to be fading We are bombarded with advice information and prescriptions as to what we should eat and drink but the issues surrounding nutrition questions of health diet taste even ecology and sustainability remain largely unresolved Unlike most commentators on this subject Rudolf Steiner tackles the theme of nutrition in a refreshingly open way At no point does he try to tell us what we should or should not be putting into our bodies whether with regard to an omnivorous or vegetarian diet smoking drinking alcohol and so on The job of the scientist he says is to explain how things act and what effect they have what people do with that information is up to them However he emphasizes that our diet not only determines our physical wellbeing but can also promote or hinder our inner spiritual development In this carefully collated anthology with an introduction commentary and notes by Christian von Arnim Rudolf Steiner considers nutrition in the light of his spiritual scientific research He explains the impact of raw food vegetarian and meat diets the effects of protein fats carbohydrates and salts individual foodstuffs such as potatoes beetroots and radishes as well as the impact of alcohol and nicotine His insights are vital to anybody with a serious interest in health
