Shortland, 2000 The earliest vitreous materials in Egypt date to c 4000 BC although the production of glass faience frit or Egyptian blue does not really take off until the 18th dynasty Andrew Shortland combines descriptions of various objects made from vitreous materials with an analysis of the processes and techniques used in their production **Development History Of Ancient Chinese Glass Technology**, 2021-02-04

Worldwide research on ancient glass began in the early 20th century. A consensus has been reached in the community of Archaeology that the first manmade or synthetic glasses based on archaeological findings originated in the Middle East during the 5000-3000 s BC. By contrast, the manufacturing technology of pottery and ceramics were well developed in ancient China. The earliest pottery and ceramics dates back to the Shang Dynasty (1700 BC-770 BC) while the earliest ancient glass artifacts unearthed in China dates back to the Western Han Dynasty. Utilizing the state of the art analytical and spectroscopic methods, the recent findings demonstrate that China had already developed its own glassmaking technology at latest since 200 BC. There are two schools of viewpoint on the origin of ancient Chinese glass. The more common one believes that ancient Chinese glass originated from the import of glassmaking technology from the West as a result of Sino-West trade exchanges in the Western Han Dynasty (206 BC-25 AD). The other scientifically demonstrates that homemade ancient Chinese glass with unique domestic formula containing both PbO and BaO were made as early as in the Pre-Qin Period or even the Warring States Period (770 BC-221 BC) known as Yousha or Faience. This English version of the previously published Chinese book entitled *Development History of Ancient Chinese Glass Technology* is for universities and research institutes where various research and educational activities of ancient glass and history are conducted. With 18 chapters, the scope of this book covers very detailed information on scientifically based findings of ancient Chinese glass development and imports and influence of foreign glass products as well as influence of the foreign glass manufacturing processes through the trade exchanges along the Silk Road. s Illustrated Catalogue of the ... Byzantine Materiality Evan Freeman, Roland Betancourt, 2024-06-04 This volume explores the power of matter and materials in the Eastern Roman Empire, also known as Byzantium. Recent attention to matter as dynamic and meaningful constitutes an emerging interdisciplinary field of inquiry known as materiality, new materialism, or the material turn. Materials can be symbolic, but matter can also act on human subjects. This volume builds on these insights to consider the role of matter, materials, form, and embodied experiences in Byzantium. In many respects, Byzantine materiality represents a continuation of its Greco-Roman inheritance, which was also shared by neighboring peoples such as the Umayyads and

Abbasids But the Byzantines also developed their own unique perspectives on matter and form as with their parsing of the sacred materialities of icons the Eucharist and relics Chapters in this volume consider the cultural meanings and functions of materials such as gold and ivory the materiality of icons and relics experiences of objects as well as Byzantine philosophies of matter and form Materiality takes center stage in Byzantine constructions of power luxury belief and identity which will be of interest to scholars and students of Byzantium and the wider medieval world
