Calculation of NMR and EPR Parameters Martin Kaupp, Michael Bühl, Vladimir G. Malkin, 2006-03-06 This is the first book to present the necessary quantum chemical methods for both resonance types in one handy volume emphasizing the crucial interrelation between NMR and EPR parameters from a computational and theoretical point of view Here readers are given a broad overview of all the pertinent topics such as basic theory methodic considerations benchmark results and applications for both spectroscopy methods in such fields as biochemistry bioinorganic chemistry as well as with different substance classes including fullerenes zeolites and transition metal compounds The chapters have been written by

leading experts in a given area but with a wider audience in mind The result is the standard reference on the topic serving as a guide to the best computational methods for any given problem and is thus an indispensable tool for scientists using quantum chemical calculations of NMR and EPR parameters A must have for all chemists physicists biologists and materials scientists who wish to augment their research by quantum chemical calculations of magnetic resonance data but who are not necessarily specialists in these methods or their applications Furthermore specialists in one of the subdomains of this wide field will be grateful to find here an overview of what lies beyond their own area of focus

Molecular Complexes in Earth's Planetary, Cometary and Interstellar Atmospheres Andrei A. Vigasin, Zdeněk Slanina, 1998 This book introduces systematically the concept of weakly bound complexes into the broad field of atmospheric sciences To fill up the gap between our rapidly expanding knowledge of the individual properties of Van der Waals and hydrogen bonded molecules and our understanding of their role in the atmospheric processes an ensemble of related topics are covered by a team of expert co authors The general properties of the weakly bound molecular complexes or clusters are discussed as well as their distribution in the planetary atmospheres Collision induced and dimeric absorption and emission are considered in the context of atmospheric spectroscopy The advanced experimental techniques which enable us to study the spectroscopic features of molecular complexes in the gas phase or which are adsorbed are reviewed The role of molecular complexes in the cometary atmosphere the Earth mesosphere and the atmospheres of the giant planets and some of their satellites are also discussed in detail

Computational Studies Of New Materials Thomas F George, Daniel A Jelski, 1999-03-26 This important book is a collection of articles discussing computational studies of new materials It is intended not only for workers in computational materials science but also for people with a broader interest in the materials being discussed The emphasis therefore is on the materials and not primarily on the development of new computational tools The specific topics covered are surface induced optical effects adsorbates crystals semiconductors clusters fullerenes fractals and liquid helium **Handbook of Carbon Nano Materials** Francis D'Souza, Karl M. Fullerenes Group, Electrochemical Society. Meeting, 2000 *Weakly Interacting Molecular Pairs: Unconventional Absorbers of Radiation in the Atmosphere* Claude Camy-Peyret, Andrei A. Vigasin, 2012-12-06 The Advanced Research Workshop entitled Weakly Interacting Molecular Pairs Unconventional Absorbers of Radiation in the Atmosphere was held in Abbaye de Fontevraud France from April 29 to May 3 2002 The meeting involved 40 researchers from 14 countries The goal of this meeting was to address a problem that the scientific community is aware of for many years Up now however the solution for this problem is far from satisfactory Pair effects are called unconventional in the title of this meeting In specific spectral domains and/or geophysical conditions they are recognized to play a dominant role in the absorption emission properties of the atmosphere Water vapor continuum absorption is among the most prominent examples Permanently improving accuracy of both laboratory studies and field observations requires better knowledge of the spectroscopic features attributable to molecular pairs which may form at equilibrium The Workshop was targeted both to clarify the pending questions and as far as feasible to trace the path to possible answers since the underlying phenomena are yet incompletely understood and since a reliable theory is often not available On the other hand the lack of precise laboratory data on bimolecular absorption is

often precluding the construction of reliable theoretical models Ideally the knowledge accumulated in the course of laboratory studies should correlate with the practical demands from those who are carrying out atmospheric eld measurements and space observations

Reviews in Computational Chemistry Kenny B. Lipkowitz,Donald B. Boyd,2009-09-22 Not only a major reference work for sale to the library market this series is now receiving an increase in purchases by individuals This increase is due to the explosive growth in the use of computational chemistry throughout many scientific disciplines As each volume does not follow a singular theme the table of contents is a vital tool in the defining the areas examined by a volume The series contains updated and comprehensive compendiums of molecular modeling software that list hundreds of programs services suppliers and other information that every chemist will find useful Detailed author and subject indices on each volume help the reader to quickly discover particular topics Uniting the most respected authors in their fields the series is designed to help the reader stay abreast of the many new developments in computational techniques The chapters are approached in a tutorial manner and wirtten in a non mathematical style allowing students and researches to access computational methods outside their immediate area of expertise

From Chemical Topology to Three-Dimensional Geometry Alexandru T. Balaban,2006-04-11 Even high speed supercomputers cannot easily convert traditional two dimensional databases from chemical topology into the three dimensional ones demanded by today s chemists particularly those working in drug design This fascinating volume resolves this problem by positing mathematical and topological models which greatly expand the capabilities of chemical graph theory The authors examine QSAR and molecular similarity studies the relationship between the sequence of amino acids and the less familiar secondary and tertiary protein structures and new topological methods
