Topology And Quantum Field Theory: Proceedings Of The 13th Johns Hopkins Workshop Luca Lusanna,1989-12-01

This book fills a gap in literature for the important interdisciplinary area of biochemical physics adopting the chemist's view of this topic in the process. The present status of the theory of electron spin effects in fundamental processes such as spin exchange dipole-dipole interactions, electron transfer triplet-triplet energy transfer and annihilation intersystem crossing is reviewed. These effects form a basis for the understanding of the molecular mechanisms essential to chemical and biological reactions including photosynthesis and magnetic field influence and for the creation of advanced organic magnets and catalysts as well as the development of new methods of studying the structural and molecular dynamics of biological and non-biological objects. Search For New Elementary Particles, The: Status And Prospect - Proceedings Of The Trieste

Workshop Martin Lewis Perl, L. Beers, G. Herten, 1993-06-14. It has been more than a decade since new elementary particles were discovered. To recognize the findings of scientists in this still fairly new but exciting and promising area of research, the Trieste Workshop was organized in May 1992 to discuss the status and explore the prospects for the discovery of new elementary particles using the full variety of search methods which are or will be available to the physicist. All papers in this collection of proceedings are reviews written by experts in their own area of speciality. Many review papers based on experimental findings are also included. To present a clearer and more coherent overview, a theoretical overview talk as well as a summary talk have been included to serve as a link between the various areas that were discussed in the papers. This collection of papers is perhaps the first authoritative source ever published on the search for new elementary particles.

Perspectives Of Strong Coupling Gauge Theories: Proceedings Of The 1996 International Workshop Koichi Yamawaki, J. Nishimura, 1998-03-04. This is the proceedings of the third Nagoya workshop on Strong Coupling Gauge Theories (SCGT) after SCGT 88 and SCGT 90. As a tradition of the Nagoya SCGT workshops, the focus is on dynamical symmetry breaking with particular emphasis on the nontrivial fixed points and/or large anomalous dimension which was actually the basis of walking technicolor, strong ETC technicolor and top quark condensate etc. Special attention is also paid to the fixed point structure in supersymmetric gauge theories which has recently been highlighted through duality arguments.

Supersymmetry And Unification Of Fundamental Interactions (Susy 93) - Proceedings Of The International Workshop Pran Nath, 1993-11-22. The recent high precision results from the LEP supercollider at CERN appear favorable for supergravity unification of the electroweak and the strong forces. The proceedings of the SUSY 93 Workshop focus on further precise predictions of unification which may be observed in the laboratory. In addition, the proceedings cover a wide range of other topics in supersymmetry, supergravity, particle physics, string theory and cosmology and their interconnections. They include both theoretical and experimental papers, hence presenting a complete and comprehensive picture of this important subject.
