Jongen,P. Jonker,F. Twilt,1986 In this second volume we pay attention to three important subjects in nonlinear optimization The first one concerns the dependence of an optimization problem on the problem data stability resp sensitivity aspects are considered from both a local and global point of view Since stability results are intimately related with some concepts of transversality we treat transversality theory in detail A second subject consists on one hand of gradients the gradient differential equation and its use in the search for several local minima On the other hand we treat the underlying differential equation for Newton s method for finding critical points of a function Again transversality plays a crucial role Finally we consider optimization problems depending on parameters critical sets bifurcation of the feasible set etc The present volume is preceded by a first one in which we study manifolds with boundary and critical point theory Morse theory within the framework of nonlinear optimization    *Nonlinear Optimization in IRn* Hubertus Th. Papageorgiou,Vicențiu D. Rădulescu,Dušan D. of mathematics including topology functional analysis mathematical physics and potential theory Throughout the book a nice balance is maintained between rigorous mathematics and physical applications The primary readership includes graduate students and researchers in pure and applied nonlinear analysis
