communication from the committee to those planning the NPRB's programs to help them improve the science plan and ensure successful implementation

Developing a Research and Restoration Plan for Arctic-Yukon-Kuskokwim (Western Alaska) Salmon National Research Council, Division on Earth and Life Studies, Polar Research Board, Board on Environmental Studies and Toxicology, Committee on Review of Arctic-Yukon-Kuskokwim (Western Alaska) Research and Restoration Plan for Salmon, 2005-07-06 Recent declines in the abundance of salmon in the Arctic Yukon Kuskokwim AYK region of western Alaska have created hardships for the people and communities who depend on this resource. In 2002 the AYK Sustainable Salmon Initiative SSI was created to undertake research to understand the reasons for this decline and to help support sustainable management in the region. This report makes recommendations for developing the research that the AYK SSI science plan should be based on and relates the development of a restoration plan to the results of that research.

The Future of Fisheries Science in North America Richard J. Beamish, Brian J. Rothschild, 2009-02-07 Fisheries science in North America is changing in response to a changing climate: new technologies, an ecosystem approach to management, and new thinking about the processes affecting stock and recruitment. Authors of the 34 chapters review the science in their particular fields and use their experience to develop informed opinions about the future. Everyone associated with fish, fisheries, and fisheries management will find material that will stimulate their thinking about the future. Readers will be impressed with the potential for new discoveries but disturbed by how much needs to be done in fisheries science if we are to sustain North American fisheries in our changing climate. Officials that manage or fund fisheries science will appreciate the urgency for the new information needed for the stewardship of fish populations and their ecosystems. Research organizations may want to keep some extra copies for a future look back into the thoughts of a wide range of fisheries professionals. Fisheries science has been full of surprises, with some of the surprises having major economic impacts. It is important to minimize these impacts as the demand for seafood increases and the complexities of fisheries management increase.

Science, Policy, and the Coast National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Science and Policy for the Coastal Ocean, 1995-08-31 This book summarizes three symposia that were convened in the California Gulf of Maine and Gulf of Mexico regions to seek new ways to improve the use of science in coastal policymaking. The book recommends actions that could be taken by federal and state agencies and legislatures, local authorities, scientists, universities, the media, nongovernmental organizations, and the public to yield better coastal decisions and policies. It is unique in that it resulted from a partnership among natural scientists, social scientists, and policymakers.

species ecosystem services and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats
