Philidor, 2017-07-18 Excerpt from *The Elements of Chess A Treatise Combining Theory With Practice and Comprising the Whole of Philidor's Games and Explanatory Notes New Modelled And Arranged Upon an Original Plan* A careful examination of the subject suggested the idea of numbering the squares on the board and marking such of the pieces as are liable to be mistaken. He accordingly made the experiment by playing over one of Philidor's games on a board and with pieces distinctly marked carefully noting the numbers of the squares to correspond with Philidor's directions. The result encouraged him to proceed and new model the whole of the games upon this plan with such alterations in the style of the notes as appeared to him necessary for general use. The work thus prepared is now presented to the public under a strong impression that the method proposed though extremely simple and easily put in practice will be found to answer the wishes and expectations of those who are desirous of learning the principles and practice of this ingenious and interesting game. It remains for him only to point out the mode of preparing the board and pieces. This is done with a common black lead pencil by marking on the foot of each of the following pieces of both colours one letter as directed below. Hyperthematics Marc M. Anderson, 2019-06-14 In this innovative work Marc M. Anderson presents an account of value and value creation which both defines value and introduces a method to manipulate value practically. Using this new methodology Anderson first explores where value lies in experience both human and otherwise uncovering tendencies in human action and the natural world that create and destroy value. From that analysis he generates practical principles to be applied in creating value in any region or discipline of human experience at any scale including corporate organization and product design, economics, the sciences, the arts, urban and architectural design and sustainable development. He tests this methodology by focusing on the organization and production of commercial corporations in particular suggesting ways to rethink and transform organization, product creation and the contemporary currency system. He considers the implications for the many intersections of corporate production with human life from urban planning, medicine and food production to pornography, weaponry and environmental engagement with corresponding suggestions for transformation toward value. Throughout *Hyperthematics* examines complexity, the nature of objects, the inevitable future intermingling of science and ethics and assumptions driving the contemporary culture wars.
