Edward Williams Morley Howard Raymond Williams,1957 **Bibliography on the History of Chemistry and Chemical Technology. 17th to the 19th Century** Valentin Wehefritz,2011-06-24 No detailed description available for Bibliography on the History of Chemistry and Chemical Technology 17th to the 19th Century *The Ethereal Aether* Loyd S. Swenson, Jr.,2013-08-28 The Ethereal Aether is a historical narrative of one of the great experiments in modern physical science The fame of the 1887 Michelson Morley aether drift test on the relative motion of the earth and the luminiferous aether derives largely from the role it is popularly supposed to have played in the origins and later in the justification of Albert Einstein's first theory of relativity its importance is its own As a case history of the intermittent performance of an experiment in physical optics from 1880 to 1930 and of the men whose work it was this study describes chronologically the conception experimental design first trials repetitions influence on physical theory and eventual climax of the optical experiment Michelson Morley and their colleague Miller were the prime actors in this half century drama of confrontation between experimental and theoretical physics The issue concerned the relative motion of Spaceship Earth and the Universe as measured against the background of a luminiferous medium supposedly filling all interstellar space At stake it seemed were the phenomena of astronomical aberration the wave theory of light and the Newtonian concepts of absolute space and time James Clerk Maxwell's suggestion for a test of his electromagnetic theory was translated by Michelson into an experimental design in 1881 redesigned and reaffirmed as a null result with Morley in 1887 thereafter modified and partially repeated by Morley and Miller finally completed in 1926 by Miller alone then by Michelson's team again in the late 1920s Meanwhile Helmholtz Kelvin Rayleigh FitzGerald Lodge Larmor Lorentz and Poincaré most of the great names in theoretical physics at the turn of the twentieth century had wrestled with the anomaly presented by Michelson's experiment As the relativity and quantum theories matured wave particle duality was accepted by a new generation of physicists The aether drift tests disproved the old and verified the new theories of light and electromagnetism By 1930 they seemed to explain Einstein relativity and space time But in historical fact the aether died only with its believers **The History of Science in the United States** Marc Rothenberg,2001 Annotation This Encyclopedia examines all aspects of the history of science in the United States with a special emphasis placed on the historiography of science in America Contains more than 500 entries written by experts in the field **Instruments, Travel and Science** Marie Noëlle Bourguet,Christian Licoppe,H. Otto Sibum,2003-08-29 We are now accustomed to conceive of science as an instrumental activity producing numbers measurements and graphs by means of sophisticated devices This book investigates the historical process that gave rise to this instrumental culture The contributors trace the displacement of instruments across the globe the spread of practices or precision and the circulation and appropriation of skills and knowledge Through comparative and contextual approaches the volume confronts the tension between the local and the global examining the process of the universalization of science

Bringing together case studies ranging from the seventeenth to the twentieth centuries contributors discuss French German and British initiatives as well as the knowledge and techniques of travellers in countries such as India Africa South East Asia and the Americas Students and researchers interested in the history of science in both Western and non Western cultures will find this book a valuable and thought provoking read

Historical Studies in the Physical Sciences, Volume 5

Russell McCormack, 2015-03-08 Historical Studies in the Physical Sciences is a continuing series of volumes comprising articles that elucidate the intellectual and social history of the physical sciences from the eighteenth century to the present The articles offered in Volume 5 share a common theme a concern with modern physics and its relation to other scientific disciplines and to its cultural and material context Originally published in 1975 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Portraits of the Great Bible-believing Scientists Franjo Stvarnik, 2018-10-29 More than 60 years ago remembered Mr Stvarnik I read the books From Ancient Philosophy to Modern Science of Atoms by prof dr Ivan Supek and the Images from the Lives of Great Scientists by prof dr Milutin Milankovic and for me these are still the most beautiful scientific texts From that time as a much loving hobby Mr Stvarnik has studied biographies of great scientists I have grown up in an atheistic country he once said and therefore it was a surprise to find that there were very few atheistic or agnostic scientists the majority of them were some kind of believers in God Actually a good number of the greatest scientific minds were or are Bible believing Christians That realization along with discoveries of some deliberate distortions of historical facts that made certain Bible believing scientists look as having an atheistic bent prompted writing a book The Portraits of the Great Bible believing Scientists that was published in Croatian and in Serbian languages Now he has written the same in English but since many years elapsed from the mentioned publications he enriched the text with new findings and added 12 new portraits into the book

Synchronicity Paul Halpern, 2020-08-18 From Aristotle's Physics to quantum teleportation learn about the scientific pursuit of instantaneous connections in this insightful examination of our world. For millennia scientists have puzzled over a simple question: Does the universe have a speed limit? If not, some effects could happen at the same instant as the actions that caused them, and some effects ludicrously might even happen before their causes. By one hundred years ago it seemed clear that the speed of light was the fastest possible speed. Causality was safe. And then quantum mechanics happened, introducing spooky connections that seemed to circumvent the law of cause and effect. Inspired by the new physics, psychologist Carl Jung and physicist Wolfgang Pauli explored a concept called synchronicity, a weird phenomenon they thought could link events without causes. Synchronicity tells that sprawling tale of insight and creativity and asks where these ideas, some plain crazy and others crazy powerful, are taking the human story next. *The Yale Alumni Weekly*, 1909 **Einstein's Pathway to the Special Theory of Relativity** Galina Weinstein, 2015-06-18 This book pieces together the jigsaw puzzle of Einstein's journey to discovering the special theory of relativity. Between 1902 and 1905 Einstein sat in the Patent Office and may have made calculations on old pieces of paper that were once patent drafts. One can imagine Einstein trying to hide from his boss, writing notes on small sheets of paper and, according to reports, seeing to it that the small sheets of paper on which he was writing would vanish into his desk drawer as soon as he heard footsteps approaching his door. He probably discarded many pieces of papers and calculations and flung them in the waste paper basket in the Patent Office. The end result was that Einstein published nothing regarding the special theory of relativity prior to 1905. For many years before 1905 he had been intensely concerned with the topic; in fact, he was busily working on the problem for seven or eight years prior to 1905. Unfortunately, there are no surviving notebooks and manuscripts, no notes and papers or other primary sources from this critical period to provide any information about the crucial steps that led Einstein to his great discovery. In May 1905 Henri Poincaré sent three letters to Hendrik Lorentz at the same time that Einstein wrote his famous May 1905 letter to Conrad Habicht promising him four works of which the fourth one, Relativity, was a rough draft at that point. In the May 1905 letters to Lorentz, Poincaré presented the basic equations of his 1905 Dynamics of the Electron, meaning that at this point Poincaré and Einstein both had drafts of papers relating to the principle of relativity. The book discusses Einstein's and Poincaré's creativity and the process by which their ideas developed. The book also explores the misunderstandings and paradoxes apparent in the theory of relativity and unravels the subtleties and creativity of Einstein. **Material Characterization Techniques and Applications** Euth Ortiz Ortega, Hamed Hosseini, Ingrid Berenice Aguilar Meza, María José Rosales López, Andrea Rodríguez Vera, Samira Hosseini, 2022-02-12 This book presents commonly applied characterization techniques in material science: their brief history and origins, mechanism of operation, advantages and disadvantages, their biosensing applications, and troubleshooting for

each technique while addressing the challenges researchers face when working with these techniques The book dedicates its focus to identifying physicochemical and electrochemical nature of materials including analyses of morphology mass spectrometry and topography as well as the characterization of elemental structural thermal wettability electrochemical and chromatography properties Additionally the main features and benefits of using coupled characterization techniques are discussed in this book *Science in Nineteenth-Century America* Nathan Reingold,1985-06-15 Combining well chosen correspondence of scientists with historical commentary Reingold brings to life the developing American scientific community of the nineteenth century The reader catches glimpses of William Maclure mixing science and social reform of Joseph Henry struggling to make a place for research at the Smithsonian Institution of Gray and Dana corresponding with Darwin of Newcomb and Michelson planning experiments on the speed of light John C Greene Science **Proceedings of the Royal Society of London** Royal Society (Great Britain),1908 Publishes refereed research papers in all aspects of the biological sciences As a fast track journal it specialises in the rapid delivery of the latest research to the scientific community *The Chautauquan* ,1892 *Scientists of Faith* Dan Graves, The personal stories of forty eight historic scientists and an overview of their contributions to their field and faith Yale Alumni Weekly ,1908
