Encyclopedia of Children, Adolescents, and the Media Jeffrey Jensen Arnett,2007 Publisher Description

Handbook of Child Psychology and Developmental Science, Ecological Settings and Processes ,2015-03-31 The essential reference for human development theory updatedand reconceptualized The Handbook of Child Psychology and DevelopmentalScience a four volume reference is the field defining work towhich all others are compared First published in 1946 and now inits Seventh Edition the Handbook has long been consideredthe definitive guide to the field of developmental science Volume 4 Ecological Settings and Processes in DevelopmentalSystems is centrally concerned with the people conditions andevents outside individuals that affect children and theirdevelopment To understand children s development it

is both necessary and desirable to embrace all of these social and physical contexts. Guided by the relational developmental systems meta-theory, the chapters in the volume are ordered in a manner that begins with the near proximal contexts in which children find themselves and moving through to distal contexts that influence children in equally compelling if less immediately manifest ways. The volume emphasizes that the child's environment is complex, multi-dimensional, and structurally organized into interlinked contexts; children actively contribute to their development; the child and the environment are inextricably linked; and contributions of both child and environment are essential to explain or understand development. Understand the role of parents, other family members, peers, and other adults, teachers, coaches, mentors in a child's development. Discover the key neighborhood, community, and institutional settings of human development. Examine the role of activities, work, and media in child and adolescent development. Learn about the role of medicine, law, government, war, and disaster, culture, and history in contributing to the processes of human development. The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period. There is a paradigm shift that involves increasingly greater understanding of how to describe, explain, and optimize the course of human life for diverse individuals living within diverse contexts. This Handbook is the definitive reference for educators, policy makers, researchers, students, and practitioners in human development, psychology, sociology, anthropology, and neuroscience.

The range of media effects addressed herein includes news diffusion, learning from the mass media, socialization of children and adolescents, influences on public opinion and voting, and violent and sexually explicit media content. The text examines relevant research done in these areas and discusses it in a thorough and accessible manner. It also presents a variety of theoretical approaches to understanding media effects, including psychological and content-based theories. In addition, it demonstrates how theories can guide future research into the effects of newer mass communication technologies. The second edition includes a new chapter on effects of entertainment, as well as text boxes with examples for each chapter. Discussion of new technology effects is integrated throughout the chapters, expanded pedagogy, and updates to the theory and research in the text.
