

# SEQUENCING OF ANTIBIOTIC THERAPY

Initial periodontal therapy should include thorough mechanical root debridement followed by surgical access if needed.

Antibiotics may be prescribed on the basis of the clinical need for further treatment, findings of microbiological testing, and the medical status and current medications of the patient.

The clinical response should be evaluated 1-3 months after completion of the mechanical therapy.

If periodontal inflammation does not resolve, a microbiological examination of the subgingival microbiota may help determine the presence and amount of remaining putative periodontal pathogens.
