Efficient Parsing For Natural Language:

Efficient Parsing for Natural Language Masaru Tomita, 1985-09-30 Parsing Efficiency is crucial when building practical natural language systems. It is especially the case for interactive systems such as natural language database access interfaces to expert systems and interactive machine translation. Despite its importance, parsing efficiency has received little attention in the area of natural language processing. In the areas of compiler design and theoretical computer science, on the other hand, parsing algorithms have been evaluated primarily in terms of the theoretical worst case analysis, e.g. $O(N^3)$ and very few practical comparisons have been made. This book introduces a context free parsing algorithm that parses natural language more efficiently than any other existing parsing algorithms in practice. Its feasibility for use in practical systems is being proven in its application to Japanese language interface at Carnegie Group Inc and to the continuous speech recognition project at Carnegie Mellon University. This work was done while I was pursuing a Ph.D. degree at Carnegie Mellon University. My advisers Herb Simon and Jaime Carbonell deserve many thanks for their unfailing support, advice and encouragement during my graduate studies. I would like to thank Phil Hayes and Ralph Grishman for their helpful comments and criticism that in many ways improved the quality of this book. I wish also to thank Steven Brooks for insightful comments on theoretical aspects of the book, chapter 4, appendices A, B and C, and Rich Thomason for improving the linguistic part of the book. The very beginning of section 1.1. *Handbook of Natural Language Processing* Nitin Indurkha, Fred J. Damerau, 2010-02-22 The Handbook of Natural Language Processing Second Edition presents practical tools and techniques for implementing natural language processing in computer systems. Along with removing outdated material, this edition updates every chapter and expands the content to include emerging areas such as sentiment analysis. New to the Second Edition: Greater *Handbook of Natural Language Processing* Robert Dale, Hermann Moisl, Harold Somers, 2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics, empirical corpus analysis and artificial neural networks. It emphasizes the practical tools to accommodate the selected system. **NATURAL LANGUAGE PROCESSING** BHARATI AKSHAR, VINEET CHAITANYA, SANGAL, RAJEEV, 1995-01-01 This book presents a Paninian perspective towards natural language processing. It has three objectives: 1. to introduce the reader to NLP 2. to introduce the reader to Paninian Grammar PG which is the application of the original Paninian framework to the processing of modern Indian languages using the computer 3. to compare Paninian Grammar PG framework with modern Western computational grammar frameworks. Indian languages like many other languages of the world have relatively free word order. They also have a rich system of case endings and post positions. In contrast to this, the majority of grammar frameworks are designed for English and other positional languages. The unique aspect of the computational grammar described here is that it is designed for free word order languages and makes special use of case endings and post positions. Efficient parsers for the grammar are also described. The computational grammar is likely to be suitable for other free word

order languages of the world Second half of the book presents a comparison of Paninian Grammar PG with existing modern western computational grammars It introduces three western grammar frameworks using examples from English Lexical Functional Grammar LFG Tree Adjoining Grammar TAG and Government and Binding GB The presentation does not assume any background on part of the reader regarding these frameworks Each presentation is followed by either a discussion on applicability of the framework to free word order languages or a comparison with PG framework

Robustness in Language and Speech Technology Jean-Claude Junqua, Gertjan van Noord, 2013-03-09 In this book we address robustness issues at the speech recognition and natural language parsing levels with a focus on feature extraction and noise robust recognition adaptive systems language modeling parsing and natural language understanding This book attempts to give a clear overview of the main technologies used in language and speech processing along with an extensive bibliography to enable topics of interest to be pursued further It also brings together speech and language technologies often considered separately Robustness in Language and Speech Technology serves as a valuable reference and although not intended as a formal university textbook contains some material that can be used for a course at the graduate or undergraduate level
