Electronic Spectra of Molecules and Ions in Crystals Donald S. McClure, 1959 *Solid State Physics*, 1992-11-18 Solid State Physics **Ion-Molecule Reactions** J. L. Groeneveld, 2012-12-06 The present volume contains contributions presented at the NATO Advanced Study Institute on Molecular Ions held on the island of Kos Greece from September 30 to October 10 1980 The meeting was attended by some 60 participants from 15 different countries It was the first meeting devoted exclusively to the topic of molecular ions Its vitality derived from bringing together experts and students from a wide variety of disciplines whose studies bear upon the structure of molecular ions The aim of the meeting was to assemble these scientists representing many countries in Europe and North America to discuss the advances and capabilities of the various experimental and theoretical approaches and to point out unsolved problems and directions for future research The format involving lecturers and students served as a tutorial Molecular ions play an important role in very diverse fields of nature such as reactions in the ionosphere the processes of formation of molecules in dense interstellar clouds and the magnetohydrodynamics of plasmas used for energy generation Our understanding of the properties of molecular ions their electronic and geometric structures has been developing from a variety of sources as far removed as tickling ions with radiofrequency radiation and smashing them apart at relativistic energies Various laser techniques are described and the queen of structural determination spectroscopy is well represented On the instrumental side older techniques have been perfected and new methods have evolved

Bibliography of Mass Spectroscopy Literature for 1970, 1972 *Fundamentals of Molecular Spectroscopy* Prabal Kumar Mallick, 2023-07-03 This book presents detailed aspects of different fields of molecular spectroscopy It consists of eleven chapters starting from the Born Oppenheimer approximation and its relevance to various spectra to some topics on nonlinear spectroscopy through rotational vibrational Raman and electronic spectroscopy group theoretical application nuclear magnetic resonance electron spin resonance nuclear quadrupole resonance and Mossbauer spectroscopy The intention is to present a good background of the theoretical aspects of the concerned fields which will help the readers to understand the subject firmly and apply them to their own fields according to their needs For this purpose several problems have been worked out to make the readers understand how the theories are applied in the relevant practical cases In this book it is presumed that the readers are well acquainted with the fundamentals of the basic subjects of physics for example

mathematical methods classical mechanics quantum mechanics statistical mechanics and electrodynamics The purpose of writing is not only to bring a wider field in a single book but also to develop the theories starting from the fundamentals and also from the simple to the final forms through fairly elaborate powerful techniques so that the readers become self sufficient and apply them accordingly Since this book covers most of the major fields of molecular spectroscopy it reduces the work of searching several publications and serves the purpose of getting detailed deductive pictures of various aspects of the subject in a single publication *Molecular Distortions in Ionic and Excited States* Peter V. Schastnev, Lyudmila N.

Shchegoleva, 1995-08-25 This book discusses the achievements in the study on the structure of active species being formed at the change of molecule charge or electronic state It gives a systematic outline of the problem of molecular structure distortions in radical ionic and excited states involving experimental and theoretical material The text focuses on analyzing the physical reasons for structural distortion occurrences at a model level and also with results of detailed quantum chemical calculations The book presents numerous facts on the structural distortions in ions of various types of organic molecules Data is presented for the first time on distortions in radical ions of polyfluoroaromatics and other conjugated molecules *ERDA*
