Elementary Particles And The Universe Essays In Honor Of Murray Gell Mann:

Elementary Particles and the Universe John H. Schwarz, 2005-07-21 Professor Murray Gell Mann is one of the most influential and brilliant scientists of the twentieth century His work on symmetries including the invention of the quark in the 1950s and early 1960s has provided a foundation for much of modern particle physics and was recognised by the award of the Nobel Prize for Physics in 1969 This book is a collection of research articles especially written by eminent scientists to celebrate Gell Mann s 60th birthday in September 1989 The main body of contributions are concerned with theoretical particle physics and its applications to cosmology Elementary Particles and the Universe Murray Gell-Mann, 1991-10-25

Quantum Leap: From Dirac And Feynman, Across The Universe, To Human Body And Mind Vladimir G Ivancevic,Tijana T Ivancevic,2008-10-09 This is a unique 21st century monograph that reveals a basic yet deep understanding of the universe as well as the human mind and body all from the perspective of quantum mechanics and quantum field theory This book starts with both non mathematical and mathematical preliminaries It presents the basics of both non relativistic and relativistic quantum mechanics and introduces Feynman path integrals and their application to quantum fields and string theory as well as some non quantum applications It then describes the quantum universe in the form of loop quantum gravity and quantum cosmology Lastly the book turns to the human body and mind applying quantum theory to electro muscular stimulation and consciousness It can be used as a graduate or advanced undergraduate textbook for a two semester course in quantum physics and its modern applications Some parts of the book can also be used by engineers biologists psychologists and computer scientists as well as applied mathematicians both in industry and academia

Nothingness Henning Genz,2009-04-28 Nothingness addresses one of the most puzzling problems of physics and philosophy Does empty space have an existence independent of the matter within it Is empty space really empty or is it an ocean seething with the creation and destruction of virtual matter With crystal clear prose and more than 100 cleverly rendered illustrations physicist Henning Genz takes the reader from the metaphysical speculations of the ancient Greek philosophers through the theories of Newton and the early experiments of his contemporaries right up to the current theories of quantum physics and cosmology to give us the story of one of the most fundamental and puzzling areas of modern physics and philosophy

The Physics of Immortality Frank J. Tipler,1997-09-18 Is there a higher power in the universe What happens to us when we die Leading physicist Frank J Tipler tackles these questions and more in an astonishing and profoundly important book that scientifically proves the existence of God and the physical resurrection of the dead

Broken Symmetry: Selected Papers Of Y Nambu Tohru Eguchi,K Nishijima,1995-11-17 This book contains selected papers of Prof Nambu who is one of the most original and outstanding particle theorists of our time This volume consists of about 40 papers which made fundamental contributions to our understanding of particle physics during the last few decades The unpublished lecture note on string theory 1969 and the first paper on spontaneous symmetry breaking 1961 are retyped and included The book also contains a memoir of Prof Nambu on his research career

Lie Theory And Its Applications In Physics - Proceedings Of An International Workshop Vladimir K Dobrev,Heinz-dietrich Doebner,Joachim Hilgert,1996-10-16 There is an apparent trend towards geometrization of

physical theories During the last 20 years the most successful mathematical models for the description and understanding of physical systems have been based on the Lie theory in its widest sense and various generalizations for example deformations of it This proceedings volume reflects part of the development On the mathematical side they report on representations of Lie algebras quantization procedures non commutative geometry quantum groups etc Furthermore possible physical applications of these techniques are discussed e g quantization of classical systems derivations of evolution equations discrete and deformed physical systems This volume complements the book Generalized Symmetries in Physics published by World Scientific in 1994

The Attractor Mechanism Stefano Bellucci, 2010-06-29 This book is based upon lectures presented in June 2007 at the INFN Laboratori Nazionali di Frascati School on Attractor Mechanism directed by Stefano Bellucci The symposium included such prestigious lecturers as S Ferrara M G Naydin P Levay and T Mohaupt All lectures were given at a pedagogical introductory level which is reflected in the specific flavor of this volume The book also benefits from extensive discussions about and related reworking of the various contributions In addition this volume contains contributions originating from short presentations of recent original results and an essay on the relation between complexity science and high energy physics by A Zichichi It is the fourth volume in a series of books on the general topics of supersymmetry supergravity black holes and the attractor mechanism

Ninth Marcel Grossmann Meeting, The: On Recent Developments In Theoretical And Experimental General Relativity, Gravitation & Relativistic Field Theories (In 3 Volumes) - Procs Of The Mgix Mm Meeting Vahe G Gurzadyan, Robert T Jantzen, Remo Ruffini, 2002-12-12 In 1975 the Marcel Grossmann Meetings were established by Remo Ruffini and Abdus Salam to provide a forum for discussion of recent advances in gravitation general relativity and relativistic field theories In these meetings which are held once every three years every aspect of research is emphasized mathematical foundations physical predictions and numerical and experimental investigations The major objective of these meetings is to facilitate exchange among scientists so as to deepen our understanding of the structure of space time and to review the status of both the ground based and the space based experiments aimed at testing the theory of gravitation The Marcel

Grossmann Meetings have grown under the guidance of an International Organizing Committee and a large International Coordinating Committee. The first two meetings MG1 and MG2 were held in Trieste 1975 1979. A most memorable MG3 1982 was held in Shanghai and represented the first truly international scientific meeting in China after the so called Cultural Revolution. Three years later MG4 was held in Rome 1985. It was at MG4 that astroparticle physics was born. MGIXMM was organized by the International Organizing Committee composed of D Blair Y Choquet Bruhat D Christodoulou T Damour J Ehlers F Everitt Fang Li Zhi S Hawking Y Ne eman R Ruffini chair H Sato R Sunyaev and S Weinberg. Essential to the organization was an International Coordinating Committee of 135 members from scientific institutions of 54 countries. MGIXMM was attended by 997 scientists of 69 nationalities. It took place on 28 July 2000 at the University of Rome Italy. The scientific programs included 60 plenary and review talks as well as talks in 88 parallel sessions. The three volumes of the proceedings of MGIXMM present a rather authoritative view of relativistic astrophysics which is becoming one of the priorities in scientific endeavour. The papers appearing in these volumes cover all aspects of gravitation from mathematical issues to recent observations and experiments. Their intention is to give a complete picture of our current understanding of gravitational theory at the turn of the millennium. The Marcel Grossmann Individual Awards for this meeting were presented to Cecille and Bryce DeWitt Riccardo Giacconi and Roger Penrose while the Institutional Award went to the Solvay Institute accepted on behalf of the Institute by Jacques Solvay and Ilya Prigogine. The acceptance speeches are also included in the proceedings.

Nonlinear, Deformed And Irreversible Quantum Systems - Proceedings Of The International Symposium On Mathematical Physics Heinz-dietrich Doebner,P Nattermann,Vladimir K Dobrev,1995-08-31 In recent years nonlinear and irreversible quantum mechanics is becoming increasingly important because of the availability of precision experiments There are new and successful attempts to understand quantum irreversibility The development of generalized symmetries has led to new families of evolution equations for pure and mixed states On the one hand this timely symposium covers nonlinear and irreversible quantum mechanics the theory of quantization methods causality and various problems important in this context On the other hand it reports the development of quantum group symmetries and of methods to construct deformed quantum mechanical evolution equations like the q deformed Schrödinger equations
