Structural-Chemical Systematics of Minerals

Alexander A. Godovikov, Svetlana N. Nenasheva, 2019-08-22 This book represents new structural chemical minerals of A A Godovikov which reflects the latest data on communication of the chemical composition with structure and properties of minerals conditions of their formation their paragenesis The following features lay its basis a the numerous often not considered earlier chemical signs on which chemical properties of minerals conditions of their formation or paragenesis may depend b the determined consistent patterns of communication between chemical compounds structure and fundamental properties of the elements forming them c regularities of structure change and properties of minerals depending on physical and chemical parameters of formation or environment systems This systemati considers real associations differences in physical and chemical parameters at which minerals are forming and existing In this systematic sometimes the preference is given to the last signs because all natural associations aren t casual in an arrangement of minerals so they formed as a result of difficult and longtime selection The properties of minerals are coordinated with their structure formation conditions The transition conditions from one taxon to another both at one level and at its deepenings are accurately formulated The primary type of a chemical bond was accepted as leading sign of five highest taxons The lowest taxons were allocated on a the mineral belongings to izodesmichesky or anizodesmichesky connections b the type of anion cation c the coordination number of an anion d the size of CX e the type of the structure The signs which are in the basis for systematization give the chance to find the place for new mineral types in the tables to change the place of mineral in connection with specification of its formula or structure They also allow to distinguish new taxons for the new mineral types representing chemical compounds earlier not known in nature Thus this systematic is not a stiffened representation but the developing system

Building the Foundation: Whole Numbers in the Primary Grades Maria G. Bartolini Bussi, Xu Hua Sun, 2018-03-29 This twenty third ICMI Study addresses for the first time mathematics teaching and learning in the primary school and pre school setting while also taking international perspectives socio cultural diversity and institutional constraints into account One of the main challenges of designing the first ICMI primary school study of this kind is the complex nature of mathematics at the early level Accordingly a focus area that is central to the discussion was chosen together with a number of related questions The broad area of Whole Number Arithmetic WNA including operations and relations and arithmetic word problems forms the core content of all primary mathematics curricula The study of this core content area is often regarded as foundational for

later mathematics learning However the principles and main goals of instruction on the foundational concepts and skills in WNA are far from universally agreed upon and practice varies substantially from country to country As such this study presents a meta level analysis and synthesis of what is currently known about WNA providing a useful base from which to gauge gaps and shortcomings as well as an opportunity to learn from the practices of different countries and contexts

Life Takes Place David Seamon, 2018-04-19 Life Takes Place argues that even in our mobile hypermodern world human life is impossible without place Seamon asks the question why does life take place He draws on examples of specific places and place experiences to understand place more broadly Advocating for a holistic way of understanding that he calls synergistic relationality Seamon defines places as spatial fields that gather activate sustain identify and interconnect things human beings experiences meanings and events Throughout his phenomenological explication Seamon recognizes that places are multivalent in their constitution and sophisticated in their dynamics Drawing on British philosopher J G Bennett's method of progressive approximation he considers place and place experience in terms of their holistic dialectical and processual dimensions Recognizing that places always change over time Seamon examines their processual dimension by identifying six generative processes that he labels interaction identity release realization intensification and creation Drawing on practical examples from architecture planning and urban design he argues that an understanding of these six place processes might contribute to a more rigorous place making that produces robust places and propels vibrant environmental experiences This book is a significant contribution to the growing research literature in place and place making studies

Enneagram Studies John Godolphin Bennett, 2012-04-02 Gurdjieff first introduced the enneagram to his pupils in 1916 It was presented as a universal symbol for understanding how a process in time could become organized to become an evolutionary event Such a process is no longer in time but creates its own time and becomes relatively immortal as a living structure Compiled from conversations that took place between John Bennett and his students at the International Academy for Continuous Education in England from 1971 to 1974 and with independent contributions from some of his pupils Enneagram Studies is a unique collection of lucid explanations and applications of this universal symbol From the transformation of the Biosphere to the setting up of a scientific experiment from manufacturing to aesthetic development from the preparation of a meal to The Sermon on the Mount the enneagram is shown to be a key to understanding the very structure of intelligence itself

Summer Quarter University of Chicago, 1895 **Species Concepts and Phylogenetic Theory** Quentin D. Wheeler, Rudolf Meier, 2000-06-22 No question in theoretical biology has been more perennially controversial or perplexing than What is a species Recent advances in phylogenetic theory have called into question traditional views of species and spawned many concepts that are currently competing for general acceptance Once the subject of esoteric intellectual exercises the species problem has emerged as a critically important aspect of global environmental concerns Completion of an inventory of biodiversity success in conservation predictive knowledge about life

on earth management of material resources formulation of scientifically credible public policy and law and more depend upon our adoption of the right species concept

Quentin D Wheeler and Rudolf Meier present a debate among top systematic biology theorists to consider the strengths and weaknesses of five competing concepts

Debaters include

- 1 Ernst Mayr Biological Species Concept
- 2 Rudolf Meier and Rainer Willmann Hennigian species concept
- 3 Brent Mishler and Edward Theriot one version of the Phylogenetic Species Concept
- 4 Quentin Wheeler and Norman Platnick a competing version of the Phylogenetic Species Concept
- 5 E O Wiley and Richard Mayden the Evolutionary Species Concept

Each author or pair of authors contributes three essays to the debate first a position paper with an opening argument for their respective concept of species second a counterpoint view of the weakness of competing concepts and finally a rebuttal of the attacks made by other authors

This unique and lively debate format makes the comparative advantages and disadvantages of competing species concepts clear and accessible in a single book for the first time bringing to light numerous controversies in phylogenetic theory taxonomy and philosophy of science that are important to a wide audience

Species Concepts and Phylogenetic Theory will meet a need among scientists conservationists policy makers and students of biology for an explicit critical evaluation of a large and complex literature on species

An important reference for professionals the book will prove especially useful in classrooms and discussion groups where students may find a concise lucid entrance to one of the most complex questions facing science and society

Systematics ,1970 Environment, Space, Place: Volume 8, Issue 1 (Spring 2016) C. Patrick Heidkamp; Troy Paddock; Christine Petto, CONTENTS Victor COUNTED Making Sense of Place Attachment Towards a Holistic Understanding of People Place Relationships and Experiences ABSTRACT The article is an attempt to make sense of the different interdisciplinary perspectives associated with people s attachment to places with a view to construct a holistic template for understanding peopleplace relationships and experiences We took note of the theoretical contributions of Jorgensen a theory of evolved tastes such as that developed by Dennis Dutton and an aesthetics of evolving nature based on Carlson s positive aesthetics After exploring both theories I argue that while the two positions approach aesthetics from different directions they support similar aesthetic judgments concerning landscapes and this suggests that the two positions might be incorporated into a broader theory of evolutionary aesthetics That theory is briefly outlined and applied to both natural landscapes and parks

Jeffrey B WEBB Watershed Redesign in the Upper Wabash River Drainage Area 1870 1970 ABSTRACT The Huntington Salamonie and Mississinewa reservoirs in northern Indiana control seasonal flooding in the Upper Wabash River drainage area They appeared in the 1960s after a long period of study and planning in response to large scale flooding in central and southern Indiana in the first half of the twentieth century Their construction disrupted the pattern of human ecology along the Wabash and its tributaries for many of the watershed s inhabitants Supporters touted the projects economic and recreational benefits while opponents experienced the change as a desecration of sacred space The projects saved millions in property damage and perhaps many human lives but at the cost of an enduring sense of place amid the advent of a new regime of scientific watershed management and state control over natural resources in the region Winnie
