## Elements Of Gasdynamics:

**Elements of Gasdynamics** Hans Wolfgang Liepmann, Anatol Roshko, 2001-01-01 The increasing importance of concepts from compressible fluid flow theory for aeronautical applications makes the republication of this first rate text particularly timely. Intended mainly for aeronautics students, the text will also be helpful to practicing engineers and scientists who work on problems involving the aerodynamics of compressible fluids. Covering the general principles of gas dynamics to provide a working understanding of the essentials of gas flow, the contents of this book form the foundation for a study of the specialized literature and should give the necessary background for reading original papers on the subject. Topics include introductory concepts from thermodynamics including entropy, reciprocity relations, equilibrium conditions, the law of mass action, and condensation; one dimensional gasdynamics; one dimensional wave motion; waves in supersonic flow; flow in ducts and wind tunnels; methods of measurement; the equations of frictionless flow; small perturbation theory; transonic flow; effects of viscosity and conductivity; and much more. The text includes numerous detailed figures and several useful tables, while concluding exercises demonstrate the application of the material in the text and outline additional subjects. Advanced undergraduate or graduate physics and engineering students with at least a working knowledge of calculus and basic physics will profit immensely from studying this outstanding volume. **Radiation Gas Dynamics** Shih-I. Pai, 2012-12-06 When the temperature of a gas is not too high and the density of a gas is not too low the transfer of heat by radiation is usually negligibly small in comparison with that by conduction and convection However in the hypersonic flow of space flight particularly in the re entry of a space vehicle and in the flow problem involving nuclear reaction such as in the blast wave of nuclear bomb or in the peaceful use of the controlled fusion reaction the temperature of the gas may be very high and the density of the gas may be very low As a result thermal radiation becomes a very important mode of heat transfer A complete analysis of such high temperature flow fields should be based upon a study of the gasdynamic field and the radiation field simultaneously Hence during the last few years considerable efforts have been made to study such interaction problems between gasdynamic field and radiation field and a new title Radiation Gasdynamics has been suggested for this subject Even though radiative transfer has been studied for a long time by astro physicists the interaction between the radiation field and the gadsynamic field has been only extensively studied recently
