Gupta, 2012-12-06 In any rotating machinery system the bearing has traditionally been a critical member of the entire system since it is the component that permits the relative motion between the stationary and moving parts Depending on the application a number of different bearing types have been used such as oil lubricated hydrodynamic bearings gas bearings magnetic suspensions rolling element bearings etc Hydrodynamic bearings can provide any desired load support but they are limited in stiffness and the associated power loss may be quite large Gas bearings are used for high precision applications where the supported loads are relatively light bearing power losses are very low and the rotating speeds generally high For super precision components where no frictional dissipation or bearing power loss can be tolerated magnetic suspensions are employed again the load support requirements are very low Rolling element bearings have been widely used for those applications that require greater bearing versatility due to the requirements for high load and high stiffness characteristics while allowing moderate power loss and permitting variable speeds A study of the dynamic interaction of rolling elements is therefore the subject of this text Texts covering the analysis and design methodology of rolling elements are very limited Notable works include Analysis of Stresses and Deflections Jones 1946 Vols I and II Ball and Roller Bearings Their Theory Design and Application Eschmann Hasbargen and Weigand 1958 Ball and Roller Bearing Engineering Palmgren 1959 3rd ed Advanced Bearing Technology Bisson and Anderson 1965 and Rolling Bearing Analysis Harris 1966 *Elements of Natural Philosophy* William Thomson Kelvin, 1879 **A New Treatise on Elements of**

experimental psychologists and students of machine vision In 1989 Johansson published his latest theoretical synthesis the optic sphere theory an innovative conceptualization that goes beyond his earlier proposals This volume presents for the first time an extensive precis of the out of print classic 1950 monograph prepared by Johansson It also includes a representative set of Johansson s important publications produced over the ensuing four decades These papers served as the springboard for a set of original essays by a distinguished group of North American and European scientists Part critical commentary part elaboration and part seeking new directions the entire collection makes for a singularly rich treatment of the perception of objects and events
