Elements of Organic Photochemistry D. Cowan, 2012-12-06 In the past fifteen years organic photochemistry has undergone a greater change and has stimulated more interest than probably any other area of organic chemistry What has resulted is a population explosion that is an ever increasing number of organic chemists are publishing important and exciting research papers in this area Professor Bryce Smith in the introduction to a recent volume of the Specialist Periodical Report Photochemistry Volume 6 which reviews the photochemical literature in yearly intervals states that the flood of photochemical literature is showing some signs of abatement from the high levels of two or three years ago However Volume 6 of that periodical contains 764 pages of excellent but very concise reviews We expect the development of the mechanistic aspects of organic photochemistry to continue at the present pace as new methods are developed to probe in increasing detail and shorter time scales the photochemical dynamics of both old and new photoreactions Since photochemistry is no longer the sole domain of the specialist it is relatively safe to predict a dramatic increase in the near future of the synthetic and industrial uses of organic photochemistry
