*De Bellis Antiquitatis Version 3.0* Phil Barker, Sue Laflin-Barker, 2018-07-05 DBA Version 3.0 updates the highly successful *De Bellis Antiquitatis* wargame rules for recreating ancient and medieval battles with miniature figures. The brainchild of well-known wargame designer Phil Barker and his wife Sue Laflin Barker, the simple DBA rule system combines fast play with historical realism to produce a visually realistic and exciting contest. **Elephant Elements** Francisco Pittau, Bernadette Gervais, 2001. Pittau and Gervais have managed to create a book which is stunning in design, visually humorous but with a simplicity and naivety which will appeal to both children and adults alike. Each double-page spread features a pair of elephants exhibiting contrasting features. The child-like style of the art is coupled with a sophisticated humour as the artists capture the essence of the opposites being described. This is the ideal gift book. The Continuum Encyclopedia of Symbols Udo Becker, 2000-01-01. An alphabetical reference with more than 1,500 entries that trace symbols to their cultural, religious, or mythological origins and explain the hidden or encoded meaning that lies concealed beneath objects and concepts. Second catalogue, including the additions made since 1882 Baltimore Peabody Inst., 1896. Subject Cataloging Division, 1988. Comparative Mammalian Immunology Ian R. Tizard, 2023-02-09. *Comparative Mammalian Immunology: The Evolution and Diversity of the Immune Systems of Mammals* provides a review on the current knowledge of mammalian immune systems from a comparative viewpoint. This reference encompasses recent work on the immune systems of marine mammals, bats, and marsupials, in addition to other lesser-known species, with the immune systems of humans and laboratory mice as components of chapters on primates and rodents respectively. The book also makes use of the most recent studies on the genomic sequences of the mammals to identify both common and unique features of each mammal's immune system. The book elucidates the complex but coordinated and controlled series of interactions involving cells and molecules that has evolved to protect the host against disease. Mammals consist of a highly diverse group of animals in which the immune system has been subjected to a variety of selective pressures. This is reflected in differences in the organization and function of their immune systems and is especially seen in those gene families characterized by complexity and polymorphism. Demonstrates multiple diverse pathways and mechanisms to optimize resistance and survival in the face of infectious diseases. Shows the clear patterns of emergence of different immunologic traits among the diverse orders of mammals. Reflects issues with innate or adaptive immune systems. Serves as a comprehensive review of the current state of knowledge of the immune system of each mammalian order. *The SAGE Handbook of Global Childhoods* Nicola J.
