Egf Receptor Family Biologic Mechanisms And Role In Cancer:

The EGF Receptor Family Graham Carpenter, 2004-02-06 The enormity of the literature on growth factors plus the breadth of the biological disciplines and technical expertise required prohibits a comprehensive review by even a multi disciplinary panel of authors To provide an alternative that is feasible for authors and digestible by readers this review compendium consists of a collection of articles each covering an aspect of the ErbB EGF field This compilation features articles on growth factor ligands neuregulins and individual receptors The second part of the book concentrates on the biological context of the ErbB receptors particularly in mammary development and in cancer It concludes with a discussion of the genetic systems that have enabled significant advances in research in this area Biomedical Index to PHS-supported Research ,1993 **Encyclopedia of Respiratory Medicine** Geoffrey J. Laurent, Stephen D. Shapiro, 2006 **Clinical and Biological Basis of Lung Cancer Prevention** Yves Martinet, F.R. Hirsch, J. Mulshine, J.M. Vignaud, 2012-12-06 Lung cancer is a disease with pandemic public health implications as it is now the leading cause of cancer mortality throughout the world This book results from two recent International Association for the Study of Lung Cancer IASLC Workshops on lung cancer prevention It strikes a balance between considering public health approaches to tobacco control and population based screening advances in clinical evaluation of chemoprevention approaches and the biology of lung carcinogenesis Indeed while the science of smoking cessation is evolving as new pharmacological tools are moving into clinical evaluation the current impact of molecular diagnostics is profound The rapidly evolving diagnostic technologies are revolutionizing basic scientific investigation of cancer and this trend is expected to soon spill over into the clinical practice of medicine The evolution of economical diagnostic platforms to allow for direct bronchial epithelial evaluation in high risk populations promises to improve the diagnostic lead time for this disease The hope is that enough progress will occur to permit lung cancer detection in advance of clinical cancer so that the disease can be addressed early on while it is still confined to the site of origin Chemoprevention which is designed to intervene in the early phase of carcinogenesis prior to any subjective clinical manifestation of a cancer is also generating greater research interest Moreover the benefit of aerosolized administration of chemoprevention agents over conventional oral administration has strong appeal and may result in the reduction of the incidence of cancer when combined with new diagnostic technologies **Molecular Oncology** Edward P. Gelmann, Charles L. Sawyers, Frank Joseph Rauscher (III), 2014 Reviews the origins of molecular oncology including technologies for cancer analysis key pathways in human malignancies and available pharmacologic therapies

Cumulated Index Medicus, 1993 Physiology of the Gastrointestinal Tract Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10

FROM THE PREFACE The original purpose of the First Edition of *Physiology of the Gastrointestinal Tract* to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition. The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition. The first section now titled *Basic Cell Physiology and Growth of the GI Tract* contains numerous new chapters on topics such as transcriptional regulation, signaling networks in development, apoptosis and mechanisms in malignancies. Most of the chapters in this section were edited by Juanita L. Merchant. Section II has been renamed *Neural Gastroenterology and Motility* and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology, neural regulation, stress and the regulation of food intake. Almost all of the chapters were recruited and edited by Jackie D. Wood. The third section is entirely new and contains chapters on *Immunology and Inflammation* which were edited by Kim E. Barrett. The fourth section on the *Physiology of Secretion* consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion. The last section on *Digestion and Absorption* contains new chapters on the intestinal barrier, protein sorting and ion channels along with those focusing on the uptake of specific nutrients. These chapters were recruited and edited by Hamid M. Said and Faye K. Ghishan. Collected in one set, the most current and comprehensive coverage of gastrointestinal physiology. Information presented in a style that is both readable and understandable. Valuable to the specialized researcher, the clinical gastroenterologist, the teacher and the student. Features an entirely new section on *Immunology and Inflammation*. Each section edited by the preeminent scientist in the field.
