Efforts to make moral psychology a thoroughly empirical discipline have divided philosophers along methodological fault lines isolating discussions that will profit more from intellectual exchange This volume takes an even handed approach including essays from advocates of empirical ethics as well as those who are sceptical of some of its central claims Some of these essays make novel use of empirical findings to develop philosophical research programs regarding such crucial moral phenomena as desire emotion and memory Others bring new critical scrutiny to bear on some of the most influential proposals of the empirical ethics movement including the claim that evolution undermines moral realism the effort to recruit a dual process model of the mind to support consequentialism against other moral theories and the claim that ordinary evaluative judgments are seldom if ever sensitive to reasons because moral reasoning is merely the post hoc rationalization of unthinking emotional response *Catalog of Copyright Entries.
