## **From Puzzles To Projects Solving Problems All The Way:**

**From Puzzles to Projects** John Baker, Ann Baker, 1986      *Project Zero Frameworks for Early Childhood Education: Project Spectrum : early learning activities* Howard Gardner, David Henry Feldman, Mara Krechevsky, Jie-Qi Chen, 1998-11-13

The groundbreaking work of Harvard University psychologist Howard Gardner on multiple intelligences and Tufts University psychologist David Henry Feldman on nonuniversal development is fast becoming the standard by which children's intelligence and cognitive development is understood. In this landmark three volume set Mara Krechevsky and her colleagues at Project Zero make these insights available for both teachers and scholars alike. This curriculum resource provides enriching activities in a wide variety of disciplines including mechanics and construction, movement and music.      *Guide to Math Materials* Phyllis J. Perry, 1997-02-15

Now it's easy to locate the materials you need to implement the new NCTM math standards. Organized by such math topics as problem solving, estimation, number sense and numeration, and geometry and spatial relationships, this book shows users where to find manipulatives and materials such as attribute blocks, pattern blocks, clocks, scales, multilink cubes and prisms, calculators and sorting toys. It also lists specialized math books, computer software, and a host of other learning materials, e.g., activity cards, puzzles, posters, games, reproducibles. The author briefly describes each product, cites grade level when given, and explains possible applications. Products of exceptional quality and value are highlighted, and the addresses of publishers and suppliers are given. A real time saver. Grades K-4.      *Fostering Children's Mathematical Power* Arthur Baroody, Arthur J. Baroody, Jesse L.M. Wilkins, Ronald T. Coslick, 1998-09-01

Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world. To meet the challenges of the 21st century, students will especially need mathematical power: a positive disposition toward mathematics, curiosity and self-confidence, facility with the processes of mathematical inquiry, problem solving, reasoning and communicating, and well-connected mathematical knowledge; an understanding of mathematical concepts, procedures and formulas. This guide seeks to help teachers achieve the capability to foster children's mathematical power, the ability to excite them about mathematics, help them see that it makes sense, and enable them to harness its might for solving everyday and extraordinary problems. The investigative approach attempts to foster mathematical power by making mathematics instruction process-based, understandable, or relevant to the everyday life of students. Past efforts to reform mathematics instruction have focused on only one or two of these aims, whereas the investigative approach accomplishes all three. By teaching content in a purposeful context, an inquiry-based fashion, and a meaningful manner, this approach promotes children's mathematical learning in an interesting, thought-provoking, and comprehensible way. This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom. It not only dispenses information but also serves as a catalyst for exploring, conjecturing about, discussing, and contemplating the teaching and learning of mathematics.
