**The Good Life Beyond Growth** Hartmut Rosa, Christoph Henning, 2017-08-15 Many countries have experienced a decline of economic growth for decades an effect that was only aggravated by the recent global financial crisis What if in the 21st century this is no longer an exception but the general rule Does an economy without growth necessarily bring hardship and crises as is often assumed Or could it be a chance for a better life Authors have long argued that money added to an income that already secures basic needs no longer enhances well being Also ecological constraints and a sinking global absorption capacity increasingly reduce the margin of profitability on investments Efforts to restore growth politically however often lead to reduced levels of social protection reduced ecological and health standards unfair tax burdens and rising inequalities Thus it is time to dissolve the link between economic growth and the good life This book argues that a good life beyond growth is not only possible but highly desirable It conceptualizes the good life as a fulfilled life that is embedded in social relations and at peace with nature independent of a mounting availability of resources In bringing together experts from different fields this book opens an interdisciplinary discussion that has often been restricted to separate disciplines Philosophers sociologists economists and activists come together to discuss the political and social conditions of a good life in societies which no longer rely on economic growth and no longer call for an ever expanding circle of extraction consumption pollution waste conflict and psychological burnout Read together these essays will have a major impact on the debates about economic growth economic and ecological justice and the good life in times of crisis

*The Top 50 Sustainability Books* Wayne Visser, 2017-09-08 This unique title draws together in one volume some of the best thinking to date on the pressing social and environmental challenges we face as a society These are the Top 50 Sustainability Books as voted for by the University of Cambridge Programme for Sustainability

Leadership's alumni network of over 3 000 senior leaders from around the world. In addition to profiles of all 50 titles many of the authors share their most recent reflections on the state of the world and the ongoing attempts by business, government and civil society to create a more sustainable future. Many of these authors have become household names in the environmental, social and economic justice movements from Rachel Carson, Ralph Nader and E. F. Schumacher to Vandana Shiva, Muhammad Yunus and Al Gore. Others such as Aldo Leopold, Thomas Berry and Manfred Max Neef are relatively undiscovered gems whose work should be much more widely known. By featuring these and other seminal thinkers, *The Top 50 Sustainability Books* distills a remarkable collective intelligence, one that provides devastating evidence of the problems we face as a global society yet also inspiring examples of innovative solutions. It explores our deepest fears and our highest hopes for the future. It is a must read for anyone who wants to tap into the wisdom of our age.

**Marketing in the Climate Crisis** Carys Egan-Wyer, Jon Bertilsson, 2025-08-07. Are marketers the proponents for continuous economic growth, the ultimate climate criminals? So far, their job has been to create unnecessary demand and to promote the overconsumption and waste that threatens our very existence on this planet. In this book, however, the authors explore the potential of marketing to do the opposite: that is, to help create a more ecologically sustainable future. This book argues that marketing researchers and practitioners have a crucial role to play in reimagining and promoting alternatives to growth capitalism. Existing sustainability narratives focus on sacrifice and limitation, rendering potential futures uninspiring and unappealing. Drawing on critical marketing scholarship and degrowth principles, this book proposes an alternative way of thinking: dystopian optimism, which allows us to imagine degrowth as desirable. The authors suggest that the transition to a post-growth future can be achieved by theoretically reimagining that future and outlining practical ways for critical marketers to contribute to this transition. This book adds to the small but growing stream of marketing literature that concerns itself with marketing's role in the currently unfolding ecological calamity. Marketers and marketing researchers will learn how marketing's role in the calamity is threatening its legitimacy, but by following the chapter-by-chapter analysis, they will also learn how marketing can transform itself by focusing on selling sustainable futures. This book is essential reading for those who want to understand why it is so hard for us to imagine desirable sustainable futures and who want to be part of changing that. For those who are interested in saving not just marketing's legitimacy but also the planet, it is a must read for scholars and upper-level students of critical marketing, marketing ethics, marketing theory, and consumer culture.

**Sustainable Development** David Reid, 2013-11-05. Sustainable development is the catchphrase of the 1990s. Governments around the world, international institutions, local organizations, and NGOs have committed themselves to its principles and have adopted policies to promote it. But sustainable development is difficult to define, let alone implement, and its proponents and advocates may all interpret it in very different ways. This introductory guide provides a clear and accurate account of what sustainable development actually is. David Reid gives an overview of the history of the concept and how it has evolved in recent years, describes the

obstacles to achieving sustainable development and looks at recent progress towards implementing it and at how much we have still to do

**A Contribution to Reduce Oil Consumption** Sebastian Veit, 2006-12-22 Inhaltsangabe Abstract Unlike industrialized countries the recent rise in oil prices has had a severe negative impact on the economies of oil importing developing countries Conventional strategies and models to reduce oil dependence which have been implemented in the powerful northern economies are often not feasible for developing countries due to high technological costs or unsuitability Furthermore oil reserves will deplete and consequently world market prices will climb rather than decline over the next decade Therefore I propose that cross sector strategies have to consider socio economic circumstances of developing countries The strategies I suggest do not rely on conventional methods such as coal gas nuclear or renewable energy My research further identifies variables on which national policies can be implemented in order to contribute to a reduction of global oil consumption To this end I have followed a quantitative and qualitative approach Preliminary quantitative analysis This demonstrates that some developing country economies are more vulnerable to oil price shocks than others This can be measured by the ratio of the value of net oil imports to GDP Qualitative analysis of cross sectoral strategy This polarizes methods applicable to industrialized countries on one hand and solutions that work in the socio economic circumstances of developing countries on the other Potentials to contribute to a reduction in the oil consumption are identified in the education agriculture urban planning and transportation sector In the transportation sector data for engine idling was considered scientifically for the first time The framework of policy analysis is used in the study to develop a general strategy to enter into a policy dialogue at the national level Various examples are also used to this end Baken s ESMAP study 2005 had concluded that in the near future there is little prospect for African countries to reduce their import dependence on oil My research further finds that gains in fuel savings can be 10 15 % from eco driving campaigns 2 5 % from tire inflation policy 2 5 % from idling campaigns Further reduction can be brought about by changes in the mode of transport autos instead of cars as well as increased urban walkability Education for private housing efficiency and boosting agricultural production in biomass and bio fuels are some other steps The research also reveals substantial

*The History of Development* Gilbert Rist, 2002-10 With all its hopes of a more just and materially prosperous world development has fascinated societies in both North and South Looking at this collective fancy in retrospect Gilbert Rist shows the underlying similarities of its various theories and strategies and their shared inability to transform the world He argues persuasively that development has always been a kind of collective delusion which in reality has simply promoted a widening of market relations despite the good intentions of its advocates
