Biomaterials for

Surgical Operation Shuko Suzuki,Yoshito Ikada,2011-12-21 Biomaterials for Surgical Operation offers a review of the latest advances made in developing bioabsorbable devices for surgical operations which include surgical adhesives sealants barriers for the prevention of tissue adhesion polymers for fractured bone fixation growth factors for the promotion of wound healing and sutures Over the years many descriptions of biomaterials have appeared in academic journals and books but most of them have been devoted to limited clinical areas This is in marked contrast with this volume which covers a wide

range of bioabsorbable devices used in surgery from a practical point of view The currently applied polymeric devices are critical in surgery but all involve serious problems due to their poor performance For instance fibrin glue the most widely used surgical sealant can produce only a weak gel with low adhesive strength to tissues accentuating the limited effectiveness of current treatment options Likewise the currently available barrier membranes cannot fully prevent tissue adhesion at the acceptable level and are moreover not easy to handle with endoscopes due to their poor mechanical properties Biomaterials for Surgical Operation is aimed at those who are interested in expanding their knowledge of how the problems associated with the currently used devices for surgical operation can be solved It primarily focuses on the absorbable biomaterials which are the main components of these medical devices *Yearbook of Intensive Care and Emergency Medicine 2002* Prof. Jean-Louis Vincent, 2013-11-11 The Yearbook compiles the most recent widespread developments of experimental and clinical research and practice in one comprehensive reference book The chapters are written by well recognized experts in the field of intensive care and emergency medicine It is addressed to everyone involved in internal medicine anesthesia surgery pediatrics intensive care and emergency medicine Consultative Hemostasis and Thrombosis E-Book Craig S. Journois,1997-09-01 Hemofiltration is now recognised as the optimal therapeutic solution for supplying renal function in patients with acute renal failure associated with poor hemodynamic conditions This situation is often observed in patients with severe impairment in the function of one or several other organs Since its introduction in the intensive care units in the 1970s hemofiltration has been subject to some major improvements regarding the required material and devices such as catheters lines filters or pumps This progress has been accompanied by a better knowledge of the management of patients undergoing the technique especially concerning nutritional support drug administration control of body temperature as well as fluid and electrolytes balance or cost control Moreover some additional beneficial effects of hemofiltration have been recently pointed out suggesting that this technique could provide more than an already efficient renal support by removing some substances responsible for an exaggar

Advanced Polymers in Medicine Francesco Puoci,2014-12-02 The book provides an up to date overview of the diverse medical applications of advanced polymers The book opens by presenting important background information on polymer chemistry and physicochemical characterization of polymers This serves as essential scientific support for the subsequent chapters each of which is devoted to the applications of polymers in a particular medical specialty The coverage is broad encompassing orthopedics ophthalmology tissue engineering surgery dentistry oncology drug delivery nephrology wound dressing and healing and cardiology The development of polymers that enhance the biocompatibility of blood contacting medical devices and the incorporation of polymers within biosensors are also addressed This book is an excellent guide to the recent advances in polymeric biomaterials and bridges the gap between the research literature and standard textbooks on the applications of polymers in medicine
