Assessment for the Pueblo Chemical Agent Destruction Pilot Plant National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee to Assess Designs for Pueblo and Blue Grass Chemical Agent Destruction Pilot Plants, 2005-01-18 In 1996 Congress enacted directing the Department of Defense to assess and demonstrate technology alternatives to incineration for destruction of the chemical weapons stored at Pueblo Chemical and Blue Grass Army Depots Since then the National Research Council NRC has been carrying out evaluations of candidate technologies including reviews of engineering design studies and demonstration testing Most recently the NRC was asked by the Army to evaluate designs for pilot plants at Pueblo and Blue Grass These pilot plants would use chemical neutralization for destroying the chemical agent and the energetics in the munitions stockpiles of these two depots This report provides the interim assessment of the Pueblo Chemical Agent Destruction Pilot Plant PCAPP to permit adjustment of any significant problems as soon as possible The report presents an analysis of the issues about the current PCAPP design and a series of findings and recommendations about ways to reduce concerns with involve the public more heavily in the process

Assessment of the Continuing Operability of Chemical Agent Disposal Facilities and Equipment National Research

Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Continuing Operability of Chemical Agent Disposal Facilities and Equipment, 2007-02-08 The U S Army s Chemical Materials Agency CMA currently oversees contracts for the operation of chemical agent stockpile incineration facilities at four disposal sites Because the period of time required to dispose of these chemical agents has grown beyond that originally planned the Army is becoming concerned about the possibility of growing operational problems as the processing equipment ages To help address these concerns the CMA requested the NRC to assess whether current policies and practices will be able to adequately anticipate and address facility obsolescence issues This report presents a review of potential infrastructure and equipment weaknesses given that the facilities are being operated well beyond their original design lifetime an assessment of the Army s current and evolving obsolescence management programs and offers recommendations about how the programs may be improved and strengthened to permit safe and expeditious completion of agent stockpile destruction and facility closure

Umatilla Depot Activity, Disposal of Chemical Agents and Munitions , 1996 *Recommendations for the Disposal of Chemical Agents and Munitions* National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Review and Evaluation of the Army Chemical Stockpile Disposal Program, 1994-02-01 The U S Army s chemical stockpile is aging and gradually deteriorating Its elimination has public political and environmental ramifications The U S Department of Defense has designated the Department of the Army as the executive agent responsible for the safe timely and effective elimination of the chemical stockpile This book provides recommendations on the direction the Army should take in pursuing and completing its Chemical Stockpile Disposal Program

Pine Bluff Arsenal, Disposal of Chemical Agents and Munitions , 1996 **Effects of the Deletion of Chemical Agent Washout on Operations at the Blue Grass Chemical Agent Destruction Pilot Plant** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Effects of the Deletion of Chemical Agent Washout on Operations at the Blue Grass Chemical Agent Destruction Pilot Plant, 2016-06-13 The United States manufactured significant quantities of chemical weapons during the Cold War and the years prior Because the chemical weapons are aging storage constitutes an ongoing risk to the facility workforces and to the communities nearby In addition the Chemical Weapons Convention treaty stipulates that the chemical weapons be destroyed The United States has destroyed approximately 90 percent of the chemical weapons stockpile located at seven sites As part of the effort to destroy its remaining stockpile the Department of Defense is building the Blue Grass Chemical Agent Destruction Pilot Plant BGCAPP on the Blue Grass Army Depot BGAD near Richmond Kentucky The stockpile stored at BGAD consists of rockets and projectiles containing the nerve agents GB and VX and the blister agent mustard Continued storage poses a risk to the BGAD workforce and the surrounding community because these munitions are several decades old and are developing leaks Due to public opposition to the use of incineration to destroy the BGAD stockpile

Congress mandated that non incineration technologies be identified for use at BGCAPP As a result the original BGCAPP design called for munitions to be drained of agent and then for the munition bodies to be washed out using high pressure hot water However as part of a larger package of modifications called Engineering Change Proposal 87 ECP 87 the munition washout step was eliminated Effects of the Deletion of Chemical Agent Washout on Operations at the Blue Grass Chemical Agent Destruction Pilot Plant examines the impacts of this design change on operations at BGCAPP and makes recommendations to guide future decision making Chemical Stockpile Disposal Program: Public comments and responses (RC-1, RC-2, and RC-3) Charles Baronian,1988 *Disposal of Chemical Munitions at Pueblo Chemical Depot* ,2002 A Modified Baseline Incineration Process for Mustard Projectiles at Pueblo Chemical Depot National Research Council,Division on Engineering and Physical Sciences,Board on Army Science and Technology,Committee on Review and Evaluation of the Army Chemical Stockpile Disposal Program,2001-10-27 The United States has maintained a stockpile of chemical warfare agents and munitions since World War I The Army leadership has sought outside unbiased advice on how best to dispose of the stockpile In 1987 at the request of the Under Secretary of the Army the National Research Council NRC established the Committee on Review and Evaluation of the Army Chemical Stockpile Disposal Program Stockpile Committee to provide scientific and technical advice and counsel on the CSDP This report is concerned with the technology selection for the Pueblo site where only munitions containing mustard agent are stored The report assesses a modified baseline process a slightly simplified version of the baseline incineration system that was used to dispose of mustard munitions on Johnston Island A second NRC committee is reviewing two neutralization based technologies for possible use at Pueblo The evaluation in this report is intended to assist authorities making the selection It should also help the public and other non Army stakeholders understand the modified baseline process and make sound judgments about it **Destruction of Chemical Munitions at Pueblo Chemical Depot, Colorado - Final Environmental Impact Statement** Department of the Army,2013-03-09 Public Law 99 145 and subsequent related legislation requires destruction of the U S stockpile of lethal unitary chemical agents and munitions Furthermore in 1993 an international treaty the Chemical Weapons Convention CWC was signed by 65 nations including the United States The CWC which set the deadline for completing destruction of chemical weapons as 10 years following ratification by the required number of nations received the necessary ratifications on April 29 1997 Thus the international deadline for destruction of chemical weapons as April 29 2007 The Army Chemical Stockpile Disposal Program has prepared this Final Environmental Impact Statement FEIS to assess the potential health and environmental impacts of the construction operation and closure of a facility to destroy the chemical agent and munitions stored at Pueblo Chemical Depot PCD Colorado Four alternatives are addressed in this FEIS for possible use in destruction of the PCD stockpile 1 baseline incineration which is currently in use by the Army at Deseret Chemical Depot DCD Utah and was used by the Johnston Atoll Chemical Agent Disposal System JACADS to destroy the entire stockpile on Johnston Atoll 2 modified

incineration which is based on lessons learned at JACADS and DCD 3 chemical neutralization followed by biotreatment a developing technology that would be initially operated as a pilot test facility and 4 chemical neutralization followed by supercritical water oxidation which is also under development and would be initially operated as a pilot test facility The latter two alternatives are also being evaluated in a separate DEIS prepared by the Army Assembled Chemical Weapons Assessment Program ACWA as part of four chemical neutralization technologies being considered for pilot testing at PCD and three other chemical munitions storage locations The data and information obtained from testing and full scale operation of the incineration technology and available data and information from on going studies of the neutralization technologies provided by ACWA are analyzed and compared to the extent possible in this FEIS
