Competitive Electricity Markets and Sustainability François Lévêque,2007-01-01 This book responds to the opening

up of electricity markets to competition which has completely changed the nature of power generation The building of new generation and transmission capacity and the setting of the energy mix between nuclear gas and renewable resources are mainly left to private initiative and investors The authors and the editor of this book explore whether or not market forces offer a sustainable future for electricity generation They employ economic theory and method to answer questions such as Will the market be able to ensure adequacy of generation capacity and security

Challenging Neighbours CPB Netherlands Bureau for Economic Policy Analysis, 2012-12-06 Challenging Neighbours provides wide coverage of the German and Dutch economies from an institutional point of view Pensions competition policy labour relations corporate governance and health care are among the topics for which the institutional setting and performance of Germany and the Netherlands are compared The difficulties and successes the countries have in facing pressures from aging population developments in technology and global competition are traced back to their institutional roots and lead to mutual lessons for institutional reform for German and Dutch policy makers

Designing Competitive Electricity Markets Hung-po Chao, Hillard G. Huntington, 2013-12-01 The authors are prominent economists operation researchers and engineers who have been instrumental in the development of the conceptual framework for electric power restructuring both in the United States and in other countries Rather than espousing a particular market design for the industry's future each author focuses on an important issue or set of issues and tries to frame the questions for designing electricity markets using an international perspective The book focuses on the economic and technical questions important in understanding the industry's long term development rather than providing immediate answers for the current political debates on industry competition

Deregulation of Electric Utilities Georges Zaccour,2012-12-06 Deregulation of Electric Utilities reviews the main issues relating to the changing environment in the utility industry Topics covered in depth include compensation for stranded costs efficiency gains institutional design pricing economics of scale and network externalities In addition this book assesses early experiences in electricity deregulation in continental Europe New Zealand North America and the United Kingdom *Power Structure* John E. Kwoka Jr.,2007-08-28 Power Structure examines the effects on economic performance of several key features of the U S electric power industry Paramount among these are public versus private ownership vertical integration versus deintegration and retail competition versus monopoly distribution Each of these as well as other structural characteristics of utilities and their markets are analyzed for their effects on costs and price These issues are important for a number of reasons The U S electric power industry is presently embarking on a fundamental restructuring in terms of integration and competition In other countries privatization of state owned enterprises is being viewed as the answer to unsatisfactory performance From a longer perspective the question of the relative performance of publicly owned versus privately owned utilities in the U S has never been resolved And despite much speculation there is little reliable evidence as to the importance of either vertical integration or competition *Competition in Network Industries* Michael U. Klein,1996

Macchiati,D. Piacentino,2016-07-27 The privatization of public utilities raises several complex issues The privatization decision involves not only the transfer of ownership from the public to the private sector and thus the design of appropriate selling procedures with regard to valuation of assets flotation of shares etc but also and most importantly it appears to require the adjustment of significant features of the industrial organization and the regulatory framework This volume focuses on the two related questions of why and how to proceed to privatization

Management of Regulatory Influences on Corporate Strategy and Structure Sebastian Frankenberger,2007-10-29 Foreword In recent years regulation and deregulation issues grew into a major concern of corporate management Asked about their biggest pain points managers from different businesses not only network based industries like telecommunications transportation and energy but also chemicals or food and beverages mentioned uncertainty resulting from regulation Despite this fact strategic management has so far widely neglected the interactions and inter dependencies between corporate and regulatory actors With this dissertation the author aims at closing this gap through a better integration of external regulatory actors into the strategy formation process More specifically he asks how regulatory actors

impact corporate strategy and structure and how corporate management can proactively manage this type of external involvement Based on an extensive literature review the author shows that extant models of the strategy formation process focus almost exclusively on actors internal to the firm external actors are widely neglected In general they have been condensed under rather abstract conditions of the environment such as uncertainty or complexity If explicitly considered only selected elements e g innovativeness diversification or organizational design have been analyzed in primarily content based quantitative cross sectional studies A broader understanding of the complex inter dependencies and mutual influences between corporate and external actors remains lacking
