Reasoning with the Infinite Michel Blay,1998 Until the Scientific Revolution the nature and motions of heavenly objects were mysterious and unpredictable The Scientific Revolution was revolutionary in part because it saw the advent of many mathematical tools chief among them the calculus that natural philosophers could use to explain and predict these cosmic motions Michel Blay traces the origins of this mathematization of the world from Galileo to Newton and Laplace and considers the profound philosophical consequences of submitting the infinite to rational analysis One of Michael Blay s many fine achievements in Reasoning with the Infinite is to make us realize how velocity and later instantaneous velocity came to play a vital part in the development of a rigorous mathematical science of motion Margaret Wertheim New Scientist

Living Mirrors Ohad Nachtomy, 2019-03-29 In Living Mirrors Ohad Nachtomy examines Leibniz's attempt to re enchant the natural world that is to infuse life purpose and value into the very foundations of nature a nature that Leibniz saw as disenchanted by Descartes and Spinoza's more naturalistic and mechanistic theories Nachtomy sees Leibniz's nuanced view of infinity how it differs in the divine as well as human spheres and its relationship to numerical and metaphysical unity as key in this effort Leibniz defined living beings by means of an infinite nested structure particular to what he called natural machines and for him an intermediate kind of infinity is the defining feature of living beings Using a metaphor of a living mirror Leibniz put forth infinity as crucial to explaining the unity of a living being as well as the harmony between the infinitely small and the infinitely large in this way employing infinity and unity we can better understand life itself both as a metaphysical principle and as an empirical fact Nachtomy's sophisticated and novel treatment of the essential themes in Leibniz s work will not only interest Leibniz scholars but scholars of early modern philosophy and students of the history of philosophy and science as well **Hypotheses and Perspectives in the History and Philosophy of Science** Raffaele Pisano, Joseph Agassi, Daria Drozdova, 2017-11-23 To commemorate the 50th anniversary of his passing in 2014 this special book features studies on Alexandre Koyr 1892 1964 one of the most influential historians of science of the 20th century who re evaluated prevalent thinking on the history and philosophy of science In particular it explores Koyr's intellectual matrix and heritage within interdisciplinary fields of historical epistemological and philosophical scientific thought Koyr is rightly noted as both a versatile historian on the birth and development of modern science and for his interest in philosophical questions on the nature of scientific knowledge In the 1940s and 1950s his activities in the United States established a crucial bridge between the European historical tradition of science studies and the American academic environments and an entire generation of historians of science grew up under his direct influence The book brings together contributions from leading experts in the field and offers much needed insights into the subject from historical nature of science and philosophical perspectives It provides an absorbing and revealing read for historians philosophers and scientists alike

Kuhn, 1957 An account of the Copernican Revolution focusing on the significance of the plurality of the revolution which encompassed not only mathematical astronomy but also conceptual changes in cosmology physics philosophy and religion **Traumatic Neurosis Revisited** Leslie Chapman, 2025-06-15 This book argues that Freud's theory of the traumatic neuroses can provide a conceptual bridge between the Lacanian idea of an inaugural or founding trauma that constitutes the human subject and the more popular idea that trauma is brought about by external events for example war or sexual violence It proposes a new reading of Freud's theory which draws on Lacanian concepts including the Real jouissance the idea of suture and Lacan's deconstruction of Freud's drive theory It also argues for a cybernetic reading of Lacan's theory of language which he outlined in his second Seminar and for a reappraisal of Freud's concept of Nachtr glichkeit as a way to facilitate a better understanding of the retroactive nature of trauma and its relation to language and the drive In doing so it offers a challenge

to key assumptions underpinning the dominant discourse of trauma which is exemplified in what the author terms the PTSD paradigm In particular it challenges the idea that trauma is something that simply happens to human beings and that its effects that can be eradicated through the construction of various forms of trauma narrative for example in psychotherapy and different types of collective histories In the development of this argument the author also draws on the work of Jean Laplanche which has previously been under utilised in mainstream Lacanian theory and practice This book sheds new light on the relationship between the traumatic effects of the signifier and the impact of the external world It will be of interest to The Myth of Disenchantment Iason practitioners as well as to students and scholars of psychoanalysis and philosophy Ananda Josephson Storm, 2017-05-16 A great many theorists have argued that the defining feature of modernity is that people no longer believe in spirits myths or magic Jason Josephson Storm argues that as broad cultural history goes this narrative is wrong as attempts to suppress magic have failed more often than they have succeeded Even the human sciences have been more enchanted than is commonly supposed But that raises the question How did a magical spiritualist mesmerized Europe ever convince itself that it was disenchanted Josephson Storm traces the history of the myth of disenchantment in the births of philosophy anthropology sociology folklore psychoanalysis and religious studies Ironically the myth of mythless modernity formed at the very time that Britain France and Germany were in the midst of occult and spiritualist revivals Indeed Josephson Storm argues these disciplines founding figures were not only aware of but profoundly enmeshed in the occult milieu and it was specifically in response to this burgeoning culture of spirits and magic that they produced notions of a disenchanted world By providing a novel history of the human sciences and their connection to esotericism The Myth of Disenchantment dispatches with most widely held accounts of modernity and its break from the premodern past Unifying Heaven and Earth. Essays in the History of Early Modern Cosmology Miguel Á. Granada, Patrick J. Boner & Dario Tessicini, 2016-05-26 One of the most significant events in the history of Western civilization was the cosmological revolution of the 16th and 17th centuries Among the most salient factors in this change described by Alexandre Koyr as the destruction of the cosmos inherited from ancient Greece were Copernican heliocentrism and the substitution of a homogeneous universe for the hierarchical cosmos of the Platonic and Aristotelian tradition Starting with a new approach to the issue of the presence of Islamic astronomical devices in Copernicus work and a thorough reappraisal of the cosmological views of Paracelsus the book deals mainly with the abolition of cosmological dualism and the ways in which it affected the decline of astrology over the 17th century Other related topics include planetary order and theories of world harmony the cause of planetary motion in the Tychonic world system or the discussion on comets in Germany through the first presentation of a manuscript treatise by Michael Maestlin on the great comet of 1618 2001: A Space Odyssey and Lacanian Psychoanalytic Theory Daniel Bristow, 2018-01-18 In 1968 Stanley Kubrick completed and released his magnum opus motion picture 2001 A Space Odyssey a time that was also tremendously important in the

formation of the psychoanalytic theory of Jacques Lacan Bringing these figures together Bristow offers a study that goes beyond as the film did He extends Lacan's late topological insights delves into conceptualisations of desire in G W F Hegel Alexandre Koj ve and Lacan himself and deals with the major themes of cuts filmic and psychoanalytic space silence surreality and das Ding in relation to the movie's enigmatic monolith This book is a tour de force of psychoanalytic theory and space odyssey that will appeal to academics and practitioners of psychoanalysis and film studies as well as to any fan of Kubrick's work
