Pathophysiology and Pharmacology of Heart Disease Naranjan S. Dhalla, Inder S. Anand, Purshotam L.

Wahi, 2012-12-06 Research at the molecular and the cellular level has greatly enhanced our understanding of the pathogenesis and management of heart disease. Valuable contributions towards this end have been made by scientists from different disciplines including biochemistry, physiology, pathology, molecular biology and biophysics. We felt that it would be of interest and value to bring together experts from diverse specialities to present their work and to discuss the common problems encountered in their endeavours. In accordance, a symposium was organised in February 1988 at the Postgraduate Institute of Medical Education Research, Chandigarh. It was held during the annual meeting of the Indian section of the International Society for Heart Research. This book is a compilation of some of the papers presented at the symposium. The symposium was sponsored by the Council on Cardiac Metabolism of the International Society and Federation of Cardiology. A number of Indian organisations gave generous financial help. These included the National Academy of Medical Sciences, Indian Council of Medical Research, Council of Scientific and Industrial Research and Department of Science and Technology. Desktop publishing was used to prepare this volume. In doing so, we came to appreciate the remarkable qualities, skills and help rendered by Professor Dharam Vir. For typing the manuscripts and for other secretarial assistance, we gratefully acknowledge the help of Ravinder and Sawtantar. **PATHOPHYSIOLOGY AND PHARMACOLOGY OF HEART DISEASE 1 THE NEWBORN PIG HEART: A SUPERIOR ANIMAL MODEL OF CARDIAC HYPERTROPHY** Howard E. **Sedimentation and Chemical Quality of Surface Water in the Heart River Drainage Basin, North Dakota** Marion Louis Maderak, 1966. The Heart River drainage basin of southwestern North Dakota comprises an area of 3 365 square miles and lies within the Missouri Plateau of the Great Plains province. Streamflow of the Heart River and its tributaries during 1949-58 was directly proportional to the drainage area. After the construction of Heart River Butte Dam in 1949 and Dickinson Dam in 1950, the mean annual streamflow near Mandan was decreased an estimated 10 percent by irrigation evaporation from the two reservoirs and municipal use. This investigation of sedimentation and chemical quality of the surface water of the Heart River basin was needed for planning the development, management and use of the water resources of the area.
