From Vines To Vessels:

From Vines to Wines in Classical Rome David L. Thurmond, 2016-12-05 David L. Thurmond's *From Vines to Wines in Classical Rome* is the first general handbook on winemaking in Rome in over 100 years. In this work, Thurmond surveys the biology of the vine, the protohistory, history, viticulture, winemaking, distribution, and modes of consumption of wine in classical Rome. He uses a close reading of the relevant Latin texts along with a careful survey of relevant archaeology and comparative practices from modern viticulture and oenology to elucidate this essential element of Roman culture.

From Vines to Vessels Beryl Omega Lumpkin, 1984 The Biology of Vines Francis E. Putz, Harold A. Mooney, 1991 This 1992 book is a treatment of what was known about climbing plants written by a group of experts. Bulletin United States. Division of Vegetable Physiology and Pathology, 1893 **Bulletin**, 1891 The War with the South. A History of the Great American Rebellion, with Biographical Sketches of Leading Statesmen and ... Naval and Military Commanders, Etc Robert Tomes (M.D.), 1867 The Science of Grapevines Markus Keller, 2025-02-19 Fully revised and updated *The Science of Grapevines* Fourth Edition is an introduction to the physical structure of the grapevine, its organs, their functions, and their interactions with the environment. Scientifically grounded and integrating discoveries in other plant species, it explores the physiological processes underlying grapevine form and function, their developmental and environmental control, and their implications for practical vineyard management. The book begins with a brief overview of the botanical classification, plant morphology, and anatomy, and growth cycles of grapevines. It then covers the basic concepts in growth and development, water relations, photosynthesis, and respiration, mineral uptake and utilization, and carbon partitioning. Then these concepts are put to use to understand plant-environment interactions, including canopy dynamics, yield formation, and fruit composition. The book concludes with an introduction to stress physiology, including water and nutrient stresses, extreme temperatures, and the interaction with other organisms. Progress in the fields of grape cultivar evolution, grape ripening, and stress physiology has been rapid since edition 3 was published in 2020. Edition four reflects the latest insights into these and other key aspects of grapevine anatomy and physiology. Based on the author's more than 30 years of teaching, research, and practical experience with grapevines and grape production, this book provides an important guide to understanding this fascinating and economically important plant. As a textbook for students and a reference for scientists and industry professionals, the book enables readers to use the discussed scientific concepts in their own research or practical production systems. Connects the science from initial decision-making processes through plant cultivation to harvest and processing. Enables prediction of the consequences of actions in the vineyard and the diagnosis and mitigation of potential problems before they threaten the sustainability of grape production. Includes specific insights on canopy-environment interactions, yield formation, sources of variation in fruit composition, and environmental constraints.
