Ecologists Guide To France:

The Ecologist's Guide to France Mary D. Davis, 1988 Handbook of Road Ecology Rodney van der Ree, Daniel J. Smith, Clara Grilo, 2015-04-02 Winner of the IENE Project Award 2016 This authoritative volume brings together some of the world's leading researchers, academics, practitioners, and transportation agency personnel to present the current status of the ecological sustainability of the linear infrastructure, primarily road, rail, and utility easements that dissect and fragment landscapes globally. It outlines the potential impacts, demonstrates how this infrastructure is being improved, and how broad ecological principles are applied to mitigate the impact of road networks on wildlife. Research and monitoring is an important aspect of road ecology encompassing all phases of a transportation project. This book covers research and monitoring to span the entire project continuum, starting with planning and design through construction and into maintenance and management. It focuses on impacts and solutions for species groups and specific regions with particular emphasis on the unique challenges facing Asia, South America, and Africa. Other key features: Contributions from authors originating from over 25 countries including from all continents. Each chapter summarizes important lessons and includes lists of further reading and thoroughly up-to-date references. Highlights principles that address key points relevant to all phases in all road projects. Explains best practices based on a number of successful international case studies. Chapters are stand-alone but they also build upon and complement each other. Extensive cross-referencing directs the reader to relevant material elsewhere in the book. Handbook of Road Ecology offers a comprehensive summary of approximately 30 years of global efforts to quantify the impacts of roads and traffic and implement effective mitigation. As such, it is essential reading for those involved in the planning, design, assessment, and construction of new roads, the management and maintenance of existing roads, and the modifying or retrofitting of existing roads and problem locations. This handbook is an accessible resource for both developed and developing countries, including government transportation agencies, government environmental conservation agencies, NGOs, and road funding and donor organizations. The early development of a strong antinuclear movement during the 1970s made France the prototypical country for new social movements, NSMs. However, in the 1980s, these French NSMs experienced a strong decline. In this book, Jan Willem Duyvendak compares the surprising development of these NSMs in France for peace, the environment, an end to nuclear technology, solidarity, squatters' rights, women's rights, and gay rights to the development of similar campaigns in Germany, Switzerland, and the Netherlands. Although all of these countries share more or less the same economic characteristics, they

have different political traditions Duyvendak finds that by the 1980s the new social movements were weaker in France because of France's tradition of old political conflicts He concludes that because France was still beset with political splits between center periphery and urban country as well as religious and class strife the development of French society during the 1980s took place at the expense of these new social movements

DPI Publications Listing Wisconsin. Department of Public Instruction,1975 Divided Natures Kerry H Whiteside,2002-02-01 In this book Kerry Whiteside introduces the work of a range of French ecological theorists to an English speaking audience He shows how thinkers in France and in English speaking countries have produced different strains of ecological thought and suggests that the work of French ecological theorists could lessen pervasive tensions in Anglophone ecology Much of the theory written in English is shaped by the debate between anthropocentric ecologists who contend that the value of our nonhuman surroundings derives from their role in fulfilling human interests and ecocentric ecologists who contend that the nonhuman world holds ultimate value in and of itself This debate is almost nonexistent among French theorists who tend to focus on the processes linking nature and human identity Whiteside suggests that the insights of French theorists could help English language theorists to extricate themselves from endless debates over the real center of nature's value Among the French theorists discussed are Denis de Rougemont Denis Duclos Ren Dumont Luc Ferry Andr Gorz Félix Guattari Bruno Latour Alain Lipietz Edgar Morin Serge Moscovici and Michel Serres The English language theorists discussed include John Barry Robyn Eckersley Robert Goodin Tim Hayward Holmes Rolston III and Paul Taylor

Ecocritical Approaches to Literature in French Douglas L. Boudreau,Marnie M. Sullivan,2015-12-24 Ecocriticism is a critical approach that focuses on the representation in literature of the non human elements of the natural world a method of inquiry that has been largely limited to literature written in English The aim of Ecocritical Approaches to Literature in French is twofold to introduce ecocriticism to scholars of French language literature and to open ecocriticism to the vision and voices of French literature The chapters look at work not only from France but also from North America the Caribbean and Africa The discussions include fiction poetry film and pedagogy The goal of the collection is to demonstrate not only the applicability of ecocritical inquiry to literature in French but to demonstrate the possibilities of ecocritical theory on the study of French literature and also for ecocriticism itself This collection will be a useful resource both for scholars of French language literature and also for ecocritics who may have had only limited contact with literatures in languages other than English

[Towards an Ecology of World Languages](#) Louis-Jean Calvet,2006-06-23 There are around 5 000 languages spoken across the world today but the languages that coexist in our multilingual world have varied functions and fulfill various roles Some are spoken by small groups a village or a tribe others much less numerous are spoken by hundreds of millions of speakers In this major book Louis Jean Calvet one of the foremost sociolinguists working today develops an ecological approach to language in order to analyze the changing structure of the world language system The ecological approach to language begins from actual linguistic practices and studies the relations between these practices and their social political and economic environment The practices which constitute languages on the one hand and their environment on the other form a linguistic ecosystem in which languages coexist multiply and influence one another Using a rich panoply of examples from across the world Calvet elaborates the ecological approach and shows how it can shed light on the changing forms of language use in the world today Coberta llibre
