*Marine Macroecology* Jon D. Witman, Kaustuv Roy, 2009-10-15 Pioneered in the late 1980s the concept of macroecology a framework for studying ecological communities with a focus on patterns and processes revolutionized the field Although this approach has been applied mainly to terrestrial ecosystems there is increasing interest in quantifying macroecological patterns in the sea and understanding the processes that generate them Taking stock of the current work in the field and advocating a research agenda for the decades ahead *Marine Macroecology* draws together insights and approaches from a diverse group of scientists to show how marine ecology can benefit from the adoption of macroecological approaches Divided into three parts *Marine Macroecology* first provides an overview of marine diversity patterns and offers case studies of specific habitats and taxonomic groups In the second part contributors focus on process based explanations for marine ecological patterns The third part presents new approaches to understanding processes driving the macroecological patterns in the sea Uniting unique insights from different perspectives with the common goal of identifying and understanding large scale biodiversity patterns *Marine Macroecology* will inspire the next wave of marine ecologists to approach their research from a macroecological perspective

The topics covered by this first volume include embryonic and larval development and ecology, sexual maturity, mating and fecundity, population dynamic, inter specific and trophic relationships, parasitism and symbiosis, feeding ecology and the ecological role of *Neohelice granulata* in the ecosystem.

**Coastal Change, Ocean Conservation and Resilient Communities** Marcha

Johnson, Amanda Bayley, 2016-11-24 This collection of essays and design case studies explores a range of ideas and best practices for adapting to dynamic waterfront conditions while incorporating nature conservation in urbanized coastal areas. The editors have curated a selection of works contributed by leading practitioners in the fields of coastal science, community resilience, habitat restoration, sustainable landscape architecture and floodplain management. By highlighting ocean friendly innovations and strategies being applied in coastal cities today, this book illustrates ways to cohabit with many other species who share the waterfront with us: feed in salt marshes, bury their eggs on sandy beaches, fly south over cities along the Atlantic Flyway or attach themselves to an oyster reef. This book responds to the need for inventive, practical and straightforward ways to weather a changing climate while being responsible shoreline stewards.

**Interactions Between Macro- and Microorganisms in Marine Sediments**, 2005-01-14 Marine sediments support complex interactions between macro and microorganisms that have global implications for carbon and nutrient cycles. What is the state of the science on such interactions from coastal and estuarine environments to the deep sea? How does such knowledge effect environmental management? And what does future research hold in store for scientists, engineers, resource managers and educators? *Interactions between Macro and Microorganisms in Marine Sediments* responds to these questions and more by focusing on interactions between plants, microorganisms and marine sediment; interactions between animals, microorganisms and marine sediment; interactions between macro and microorganisms and the structuring of benthic communities; impact of macrobenthic activity on microbially mediated geochemical cycles in sediments; conceptual and numeric models of diagenesis that incorporate interactions between macro and microorganisms. Here is an authoritative overview of the research, experimentation and modeling approaches now in use in our rapidly evolving understanding of life in marine sediments.
