Economic Costs and Implications of High-technology Hardware Theft , RAND headquartered in Santa Monica California presents the full text of the article entitled The Economic Costs and Implications of High technology Hardware Theft written by James N Dertouzos Eric V Larson and Patricia A Ebener The paper examines the costs and implications of hardware thefts for U S high technology firms focusing on manufacturers and distributors of computers semiconductors hard disk drives and cellular phones **The Economic Costs and Implications of High-technology Hardware Theft** James N.

Dertouzos, Eric Victor Larson, Patricia Anne Ebener, 1999 This report presents the results of a study undertaken at the request of the American Electronics Association and a consortium of high tech industries Based on a nine month survey of 95 firms representing approximately 40 percent of the sales volume for the computer semiconductor hard disk drive and cellular telephone industries the authors estimate that direct costs of hardware theft are almost 250 million Indirect costs such as lost sales and expensive theft reduction strategies and industry losses could push total losses past 5 billion Industry and consumers share the price of high tech losses but firms do not always have the economic incentive to invest in appropriate security measures Since 1996 hardware theft has declined significantly and recent security measures adopted by individual firms appear to be very cost effective The authors recommend more such investments and suggest that the largest payoff will come from anticipating what products are most vulnerable and devising targeted procedures to protect them In addition they recommend strengthening collaborative industry law enforcement efforts to help track the threat anticipate targets and identify and disable stolen property Cargo Theft, Loss Prevention, and Supply Chain Security Dan Burges, 2012-07-18

*Electronic Theft* Peter Grabosky, Russell G. Smith, Gillian Dempsey, 2001-04-02 When this book was first published in 2001 the convergence of communications and computing had begun to transform Western industrial societies Increasing connectivity was accompanied by unprecedented opportunities for crimes of acquisition The fundamental principle of criminology is that crime follows opportunity and opportunities for theft abound in the digital age *Electronic Theft* named described and analysed the range of electronic and digital theft and constituted the first major survey of the field The authors covered a broad list of electronic misdemeanours including extortion defrauding governments telephone fraud securities fraud deceptive advertising and other business practices industrial espionage intellectual property crimes and the misappropriation and unauthorised use of personal information They were able to capture impressively large amounts of data internationally from both scholarly and professional sources The book posed and attempted to answer some of the pressing questions to do with national sovereignty and enforceability of laws in 2001

**Air Force Journal of Logistics**, 2000 [Air Force journal of logistics: vol24\\_no1](#), **Crime and Technology** Ernesto U. Savona, 2013-06-05 Guido Rossi As Chairman of ISPAC I want to thank all the contributors to this book that originates from the International Conference on Crime and Technology This could be the end of my presentation if I did not feel uneasy not considering one of the problems I believe to be pivotal in the relationship between crime and technology I shall also consider that the same relationship exists between terror and globalization while globalization is stemming from technology and terror from crime Transnational terrorism is today made possible by the vast array of communication tools But the paradox is that if globalization facilitates terrorist violence the fight against this war without borders is potentially disastrous for both economic development and globalization Antiterrorist measures restrict mobility and financial flows while new terrorist attacks could lead the way for an antiglobalist reaction But the global society has yet to agree on a common definition of terrorism or on a common policy against it The ordinary traditional criminal law is still depending on the sovereignty of national states while international criminal justice is only a spotty and contested last resort The fragmented and weak international institutions and underdeveloped civil societies have no power to enforce criminal justice against terrorism At the same time the states that are its targets have no interest in applying the laws of war the Geneva Conventions to their fight against terrorists
