Back to Basics International Monetary Fund, 2019-04-11 This paper discusses about capitalism that is often thought of as an economic system in which private actors own and control property in accord with their interests and demand and supply freely set prices in markets in a way that can serve the best interests of society The essential feature of capitalism is the motive to make a profit In a capitalist economy capital assets such as factories mines and railroads can be privately owned and controlled labor is purchased for money wages capital gains accrue to private owners and prices allocate capital and labor between competing uses Although some form of capitalism is the basis for nearly all economies today for much of the past century it was but one of two major approaches to economic organization In the other socialism the state owns the means of production and state owned enterprises seek to maximize social good rather than profits

**Expanding the Economic Concept of Exchange** Caroline Gerschlager, 2001-12-31 Exchange is a pervasive concept in everyday life affecting phenomena as diverse as interpersonal relationships and market transactions In addition economists have used the concept in a highly specific and clearly delineated way Against this background Expanding the Economic Concept of Exchange sets out to expand the concept of exchange by crossing the boundaries laid down by economists and by examining the function played by deceptions self deceptions and illusions The main motivation for expanding the concept of exchange was the realization that in the prototypical economic model deception is not taken into account Hence economists traditionally regard deception as some sort of irrationality as a flaw in an otherwise perfectly rational process Authors represented in this volume take a different approach examining deception as a constituent quality of exchange This is shown by the contributions drawing on recent developments in economic theory by those with an anthropological orientation as well as by a contribution referring specifically to Adam Smith An interrogation into deception is long overdue in economics This

volume prepares the ground for and makes the first contributions to explicitly acknowledging deceptions self deceptions and illusions as fundamental dimensions allowing us as economists to further research and develop the concept of change A particular and perhaps unexpected focus of this volume lies on anthropology because economics can clearly benefit from integrating selected results on deception from outside its expanding domain It is primarily targeted at economists interested in institutional aspects of exchanges and social theory In addition the topic will find interested readers from anthropology cultural studies science studies philosophy The Economic World View Maki,2001-07-23 The beliefs of economists are not solely determined by empirical evidence in direct relation to the theories and models they hold Economists hold ontological presuppositions fundamental ideas about the nature of being which direct their thinking about economic behaviour In this volume leading philosophers and economists examine these hidden presuppositions searching for a world view of economics What properties are attributed to human individuals in economic theories and which are excluded Does economic man exist Do markets have an essence Do macroeconomic aggregates exist Is the economy a mechanism the functioning of which is governed by a limited set of distinct causes What are the methodological implications of different ontological starting points This collection which establishes economic ontology as a coordinated field of study will be of great value to economists and philosophers of social sciences *Introduction to Health Economics Concepts - A Beginners Guide* Ruth Whittington,2008
