The Economic Laws of Scientific Research Terence Kealey, Simon Lancaster, 1996-05-15 Dr Kealey's brave entertaining and learned book makes a powerful case for his unpopular views. It must give pause to any open minded student of science policy. R C O Matthews. Not since J D Bernal has a practising British scientist challenged conventional arguments about the funding of science so originally and so powerfully. David Edgerton, Imperial College. Does government funding of science promote economic and cultural growth? This burning question has come to dominate political and academic thought. The evidence seems mixed. Japan flourishes economically neglecting science while the USSR and India who actively promoted government funded science have declined. The purpose of this book is to assess the myth that government funded science works economically. Supported by historical argument and international contemporary comparison, Terence Kealey argues that the free market approach rather than that of state funding has proved by far the most successful in stimulating science and innovation.

**The Scientific Method** J. Scott Armstrong, Kesten C. Green, 2022-06-30. The scientific method delivers prosperity yet scientific practice has become subject to corrupting influences from within and without the scientific community. This essential reference is intended to help remedy those threats. The authors identify eight essential criteria for the practice of science and provide checklists to help avoid costly failures in scientific practice. Not only for scientists, this book is for all stakeholders of the broad enterprise of science. Science administrators, research funders, journal editors and policymakers alike will find practical guidance on how they can encourage scientific research that produces useful discoveries. Journalists, commentators and lawyers can turn to this text for help with assessing the validity and usefulness of scientific claims. The book provides practical guidance and makes important recommendations for reforms in science policy and science administration. The message of the book is complemented by
