Population growth and the drop in the returns from the major cash crop coffee for small farmers are the main drivers that have influenced the farming systems and mobility of farmers in the Western Highlands of Cameroon. The main objective of the research that led to this book was to determine the interactions between farming systems and human mobility in this region of Cameroon. A comparative study was conducted through household and field surveys in three villages and conceptualized based on the systems approach. The different types of mobility were influenced by household social factors, the quest for high valued farm plots and hired labour. Urban rural migration contributed to occupation diversification and social mobility. The sustainability factor was a function of land use intensity, intensity of off farm inputs, the household adjustment factor and mobility of the household. The sacred groves were rich in plant diversity of varied ecological and economic importance. Nitrogen mining was common at all levels of the farming system. These determinants and types of mobility claims are pertinent to the research area. The sustainability results of the farming systems reflect the reality on the ground. The nutrient flux evaluated at the crop and farm levels constitute a valuable database for future research.

Geosciences Environment and Man has three major objectives which determine the division in three parts of this volume: I To consider the main natural geological processes interfering with and therefore threatening the activities of man: earthquakes, volcanic eruptions, land movements, floods, wind and coastal risks. Main prevention and mitigation measures against these natural hazards are presented. II To examine the exploitation of earth's natural resources such as materials, ores and minerals, fossil fuels, water, radioactivity and the resulting consequences on solid Earth balance and future. III To assess the hold level reached by the activities of man on planet surface envelopes through agriculture, urbanization, industrialization and communication. The local to global effects of human influence triggered by recent demographic growth on underground soils, water and air characters are taken into account. Both deteriorating and
