Contributing to a better understanding of contemporary issues of environmental sustainability from a historical perspective this book provides a cohesive and cogent account of the history of ecological economic thought

The work unearths a diverse set of ideas within a Western and Slavic context from the Renaissance and the Enlightenment to the late 1940s to reveal insights firmly grounded in historiographical research and of import for addressing current sustainability challenges not least by means of improving our grasp on how humans and nature can generously coexist in the long term

The history of ecological economic thought offered in this volume is rich and diverse encompassing views that are bound by the observance of the tenets of the natural sciences but which differ significantly in terms of the role of energy and materials to cultural development and the normative aspects involving resource distribution social ideals and policy making

Combining the approaches of independent scholarly figures and scientific communities from different historical periods and nationalities the book brings elements that are still missing in the scarce literature on the history of ecological economic thought and highlights the underlying threads which unite such initiatives
