The paper discusses the importance of a research effort to investigate the impact of the 1990s on the economy, and the importance of the 1990s in the history of the United States. The paper also discusses the importance of the 1990s in the history of the United States.

A large, nearly featureless plain in the desert is home to one of America's last wild horses. In the 1970s, the U.S. Fish and Wildlife Service (FWS) began a conservation program to protect the wild horses and burros that roamed the public lands of the western United States. The program was successful, and today there are more than 30,000 wild horses and burros in the United States. But the program has also had some unintended consequences. One of the most significant is the impact on the environment. The horses and burros can cause significant damage to the land, including trampling of vegetation, erosion, and the destruction of nesting sites for birds and other wildlife. This has led to a decline in the number of wild horses and burros in some areas, and has also led to a decline in the number of birds and other wildlife that live in those areas. The FWS is now working to address these issues by implementing a variety of conservation measures, including the use of fences to protect nesting sites and the removal of horses and burros from areas where they are causing damage to the environment.
